Solis Dealer Digital Ecosystem Research

Business evidence and investment decisions for the Netherlands

Prepared for Raja and company leadership

3 November 2026

Global and European evidence with a detailed audit of solistractor nl

The Netherlands already has meaningful digital tractor discovery and commerce. The next investment should establish who owns the dealer relationship and data, inspect the existing private systems, and test a connected dealer and parts workflow. Public evidence supports this discovery and pilot decision; it does not establish a Solis return on investment.

The working name Solis Structures NL is unresolved. It must not be used as a verified legal entity or contracting party.

1 Executive summary

Recommendation. Authorise discovery and a measured Dutch pilot across the Dealer Portal, Parts Intelligence, Agentic Commerce and Dealer Onboarding. Inspect existing systems and dealer tasks before committing to development.

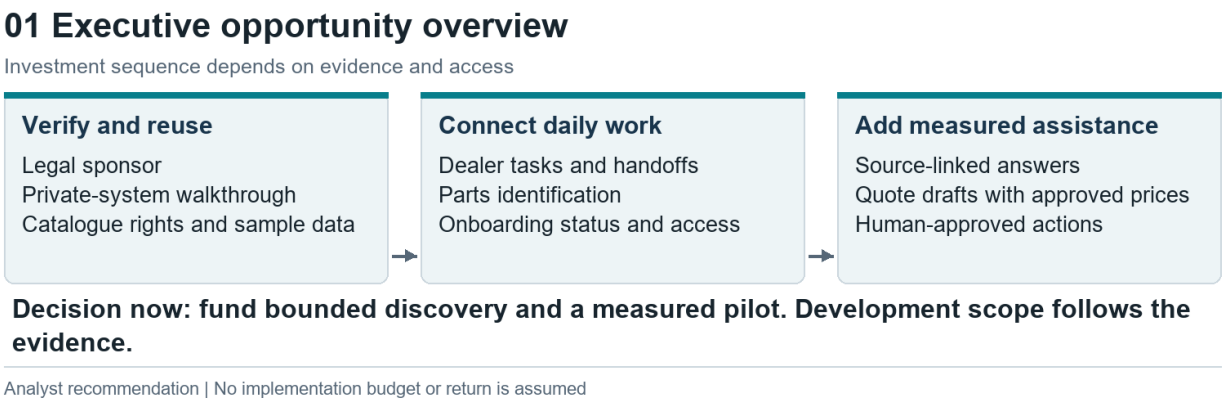

Existing capabilities. The fresh Dutch audit verifies selection, an actual comparison table, configuration, dealer/demo enquiries and a public warranty-registration form. AgriXpert also offers tractor purchase entry. Reuse these capabilities and test their operational handoff. [I07, I08, I09, I31, B26]

Private systems. German login, Romanian DMS/IBIZ links and a US portal description provide reuse leads. Dutch access and functions remain unknown. [I10, I11, M10]

Legal identity. Solis Structures NL remains unresolved. ITL's reported wholly owned Solis B.V. must be distinguished from importer AgriXpert/DIGO. Current registry extracts and contracts must establish project authority. [I04, I05, F01]

Financial evidence. No reliable Solis machine/parts split was established. AGCO parts represented 18.58% of 2025 sales. Titan's parts plus service represented 24.98% of FY2026 revenue and 63.25% of gross profit. These distinct peers cannot supply Solis margins or ROI. [F02, F03]

Immediate Dutch priorities. Resolve the published demo follow-up placeholder, investigate zero-width selector results and align registration guidance. Then test enquiry ownership, machine identity and correct-part fulfilment with dealers. These specific findings support a bounded pilot; no dealer interviews or private-system tests were conducted. [B25, B28, I31, I32]

Executive opportunity overview | Evidence map or proposed design as labelled

2 Decisions and strategic implications

Leadership can approve discovery now while retaining control over the larger investment. The following decisions separate what the evidence supports from what requires operational access.

Decision	Recommendation and rationale	Evidence needed for next commitment
Legal and commercial sponsor	Name the benefiting legal entity and accountable executive before contracting	Current KvK extracts, group chart and dealer agreement signatory
Reuse or rebuild	Inspect ITL DMS/IBIZ, regional portals and importer commerce before procurement	Authorised walkthrough, coverage, costs, integration rights and operating owner
First dealer workflow	Pilot a task queue and preserved enquiry context with a small dealer cohort	Actual handoff records, observed re-entry, agreed response responsibility
First parts workflow	Start with licensed identification and expert escalation before order execution	Serial/build coverage, catalogue rights, parts cases and stock semantics
AI scope	Trial source-linked product answers and structured handoff; defer consequential writes	Reviewed answer set, data access, approval policy and error monitoring
Onboarding scope	Track approvals and readiness; use existing signing/training tools if suitable	Qualification policy, accountable approvers and access provisioning map
Geography	Prove the Dutch operating model; assess reuse with one other importer later	Different contracts, language, prices, parts rights and support responsibilities

Dutch website corrections before a pilot. The demonstration page leaves the follow-up owner and timing unresolved in visible editorial copy. The selector can include records with 0 cm widths in a narrow-opening result. Warranty intake already exists and should be reused; its registration and extension rules need reconciliation. Fix or validate these issues with the responsible owners before adding conversational recommendations. [B25, B28, I31, I32]

Investment alternatives. Extending existing ITL/importer tools should be tested first. A thin integration workspace is attractive if core transactions already exist but context is fragmented. Buying a dealer-management or B2B commerce module can reduce custom maintenance where it fits the current systems. A custom platform becomes defensible only where a measured workflow gap survives those comparisons. These are proposed options; the report does not assert which systems are installed.

The project should have a stop condition. If existing portals already address the dealer problem at acceptable cost, concentrate on adoption, data quality and integration. If catalogue or transaction rights cannot be obtained, limit the pilot to controlled requests and deep links. If dealer task observation finds little avoidable work, revise the investment case.

3 Scope and research methodology

The research covers the global Solis brand, its actual European country routes, the Netherlands importer and dealer journey, and selected manufacturer/dealer benchmarks. Public evidence was accessed on 3 November 2026. Source publication periods are retained separately. The similar domain solis.eu was tested and excluded because it redirects to an appliance business. European tractor research uses Solis World's EU range, its official country selector and the relevant country/importer sites. [I01, I06]

The work combined source discovery with opening original pages, following public links and inspecting forms, catalogue descriptions, model options and financial disclosures. The Netherlands selector was followed through successive requirement choices, including a narrow-opening branch. An actual two-model comparison, the demonstration route, warranty form, model options, price list, importer listing, service and dealer pages were inspected. The Dutch site was rechecked specifically for this edition; access date does not establish when a feature was launched. No enquiry, application, order, warranty claim or payment was submitted. No private credentials were used. A public login proves an entry point, while public product documentation proves a described capability within its stated market.

Evidence labels. Verified means a reviewed reliable source directly supports the statement. Company claims remain identified as company descriptions. Reported means a third party or limited-access source states the claim. Inference is an analytical conclusion from cited evidence. Hypothesis is an untested operational proposition. Open question identifies information requiring ITL, importer, dealer or registry confirmation.

Capability labels. Verified present identifies a directly observed public capability or documented entry point. Partially verified means part of the journey was inspected but execution or coverage was not. Not publicly discoverable records that research did not locate the capability, without concluding it is absent. Unclear / requires direct confirmation is used where scope, permissions or system behaviour cannot be established.

Evidence quality prioritises audited filings, official corporate and product documentation, registry information and credible industry research. Forums are qualitative signals with unverified identities. Search snippets were used for discovery; inaccessible originals are recorded as limitations rather than silently accepted. No paid survey results were obtained.

An initial workspace inventory found no earlier Solis research document among the available document files. The research therefore proceeded independently. Material corrections to common assumptions are explicit: EU namesake excluded; existing selector/configurator/commerce recognised; private portal clues retained; Dutch and global parts routes separated; peer economics never presented as Solis economics.

The complete register provides source titles, publishers, direct URLs, access dates, supported claims and limitations. Cross-references such as [I08] point to that register and are linked in the editable report. Source duplicates are retained where separate research areas used the same original, and can be matched by URL.

How to use this report

Sections 1 and 2 support the immediate decision. Sections 4 to 14 provide the business, workflow, benchmark and financial evidence. Sections 15 to 20 describe a proposed connected experience and investment sequence. Sections 21 to 24 set measurement, outstanding requests, recommendations and source details. All proposed screens use illustrative task text and deliberately omit invented part numbers, stock quantities and commercial prices.

4 Solis and ITL business overview

Solis is the tractor brand presented by International Tractors Limited. The global website distinguishes EU and global ranges and links visitors to local distributors. ITL's own history and generic heritage wording differ across pages; the report does not turn marketing heritage dates or global scale claims into audited brand figures. Local model, engine, emissions and warranty variants matter for digital product data. [I02, I06, I13]

The likely commercial chain is manufacturer to regional/importer organisation to authorised dealer to owner. This is a useful analytical map, but the legal seller, invoice issuer, stock owner, warranty obligor and data controller can differ by transaction. An importer that also has retail listings may act in more than one role. Each proposed workflow must retain these distinctions.

Public Netherlands journeys combine brand discovery, dealer advice and an importer ecommerce route. A prospective owner can identify candidates and request a quote; a local dealer remains important for configuration, installation, demonstration, handover and service. Parts support depends on the exact machine and component identity, not simply its public model name. [I08, I09, I20]

Financial scale is available at ITL level only. ICRA reproduces FY2025 consolidated operating income of INR10,021.8 crore and profit after tax of INR1,780.9 crore, compared with INR9,485.4 crore and INR1,740.3 crore in FY2024. These are reported ITL indicators, not Solis-brand or Netherlands turnover. The report did not obtain ITL's full audited statements or a Solis revenue split. [F01]

Implication. A local product needs a bounded business case. Neither ITL scale nor the global dealer network establishes the Dutch volume available to a digital service. The necessary denominators are active Dutch dealers, sold and supported machines, eligible leads, parts requests and invoice lines over a defined period.

5 Corporate structure and Netherlands ecosystem

The phrase **Solis Structures NL remains an open question**. No reviewed evidence establishes it as a legal tractor company. Use it as Raja's working reference until the sponsor supplies the exact entity and current registration.

Organisation	Evidence and confidence boundary	Responsibilities requiring confirmation
International Tractors Limited	Official manufacturer and Solis brand description [I02, I06]	Catalogue, trademark, software and data licensing authority
Solis Tractors & Agricultural Machinery B.V.	ICRA reports 100% ITL ownership from FY2025 accounts [F01, I27]	Current directors, operating mandate, dealer contracts and data role
AgriXpert B.V.	Official Dutch importer/support and webshop descriptions [I04, I05, I09]	Wholesale seller, parts ownership, pricing, ERP and dealer approval rights
DIGO Groep	AgriXpert self-describes group membership [I05]	Certified legal shareholding chain and relevant contracting entities
Dutch dealers and subdealer	Official locator names locations and distinguishes a subdealer [I15]	Active contract roster, territory, sales/service authority and sharing permissions
ILAFA eG Germany	Legal notice identifies operator of German site and login [I10, I12]	Contract and system relationship to other markets

An exhibition listing places the Solis B.V. at an address associated with AgriXpert, while a registry aggregator gives another address. Shared or inconsistent addresses do not establish identity, ownership or agency. Registry-aggregator details are a lead for a current certified extract, not a substitute. [I14, I16]

Proposed ownership rule. ITL should confirm authoritative engineering and build data. The importer should confirm local price, stock and dealer terms. Dealers should confirm customer, workshop and transaction records. The actual controller/processor arrangements, contractual rights and system owners must be documented before records are combined. These are proposed responsibilities, not findings about existing contracts.

6 Existing website and digital capability audit

The material conclusion is that Solis has a distributed digital estate with significant public capability. Gaps in public visibility should become demonstration requests, not statements that systems do not exist.

Dutch website findings and their business implications

The Netherlands website is an operating customer touchpoint, not simply a brochure. The public journey combines model discovery, requirements filtering, comparison, indicative configuration prices, regional dealers, demonstration requests and warranty intake. The refresh corrects the earlier audit's incomplete comparison and Dutch registration coverage. It verifies public presence, while leaving transaction delivery and private workflows separate. [I31, I38, B26, B27]

Network scope. The site lists 19 dealers and one subdealer, consistent with the homepage's 20 sales/service points. Romox is identified under van Vijfeijken, without its own tractor stock. This is a published roster, not proof of 20 independent dealer contracts. Proposed lead routing and account permissions must support that main-dealer/subdealer relationship. Confirm the active contractual roster and service authority before provisioning accounts. [I38, I39]

Tractor discovery and comparison. The selector was followed through loading, repeated forward/reverse and width choices. A narrower-than-one-metre branch returned models whose parsed widths were 0 cm; a second branch showed a heading/card-count discrepancy. These are reproducible page-data flags, not measured tractor widths. Unknown dimensions should require confirmation before a model is represented as meeting a physical constraint. The actual S26/H26 comparison table now loads and includes technical categories and explicit missing-value labels. Previous comparison timeouts must not be described as an absent capability. [B24, B25, B26]

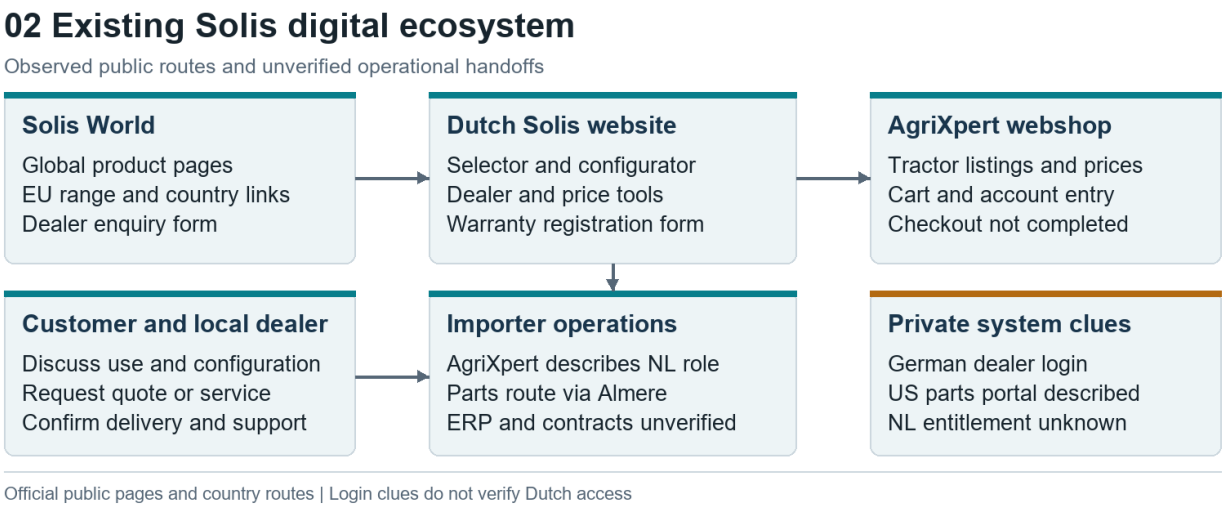

Configuration and enquiries. The S26 page exposes options and dependency guidance with indicative prices and dealer-selected enquiry. The fresh check also inspects demonstration intake. Form presence, fields and source model context can be verified; acknowledgement, received configuration, assignment, response times and CRM integration require a controlled test. Public contact routes do not demonstrate manual back-office work. [I08, B28, B27]

Demonstration content defect. The public demonstration page displays unfinished instructions asking for a follow-up owner, response timing and commercial conditions. This leaves the next step unclear to a customer. The importer should replace that text with an agreed service promise and test a received request through its responsible dealer. The finding concerns published content; no failed delivery is alleged. [B28]

Prices and commercial authority. The S50 promotion page publishes EUR 21,725 for the tractor, EUR 4,995 for the loader and EUR 650 for mounting, totalling EUR 27,370 excluding VAT. It explicitly leaves the promotion's active period for dealer confirmation. These are indicative retail amounts, not turnover, dealer margin or a binding current quote. A future assistant or quote draft must retain price-list version, included options, installation, tax, validity and commercial approval. [M12, I18]

After-sales and existing registration. Dutch service directs owners to dealers with machine identity and hours. Warranty and service pages lead to a Dutch registration form with owner, dealer, serial, purchase and invoice evidence. Registration intake is verified; processing, activation and a complete machine history remain unknown. Reuse this route before building another form, and ask the warranty owner to demonstrate acknowledgement and exception handling. The displayed lookup and photo-deletion descriptions do not establish extraction accuracy or actual deletion. [I31, I32, I33]

Importer commerce and shared data. AgriXpert offers a separate tractor purchase route. The refresh identifies differing S16 lifting/width descriptions across Dutch discovery and importer content; configuration or revision differences may explain them and must be checked. Do not choose an authoritative value by guesswork. Identify a market/model/variant master and feed consistent facts into selector, comparison, configuration, shop and future assistant. [I09, B22, B35]

Existing Solis ecosystem | Evidence map or proposed design as labelled

Capability audit across public surfaces

Capability	Status	Scope and evidence
Global and EU catalogues	Verified present	Solis World ranges and country links [I06]
Model specifications	Verified present	Global and Dutch S26 pages [I08, I26]
Model selector	Verified present	Dutch guided flow followed [I07, I17]
Configurator	Verified present	S26 options and dependency guidance [I08]; recalculation not independently tested
Indicative prices and price list	Verified present	Dated PDF and importer listings [I09, I18]
Tractor comparison	Verified present	Actual S26/H26 comparison table inspected; earlier timeout limitation superseded [B26]
Dealer locator and dealer information	Verified present	19 dealers and one subdealer; published roster and relationship [I38, I39]
Stock labels	Verified present	Importer product and generic locator labels [I09, I15]
Real-time dealer inventory	Unclear / requires direct confirmation	Quantity, refresh and reservation semantics not established
Enquiries quote and demo requests	Verified present	Dealer-selected forms; response and delivery untested [I08, B28, B27]
Automated lead routing	Unclear / requires direct confirmation	Delivery, CRM and service levels not tested
Saved or shared configurations	Unclear / requires direct confirmation	Comparison selection persistence is described; full configuration sharing and dealer transfer remain unverified [B26, B27]
Dealer interest application	Verified present	Global form and Dutch contact route [I02, I23]
Automated onboarding	Not publicly discoverable	Approvals, contracts, certification and provisioning not exposed
Tractor cart and purchase entry	Verified present	AgriXpert configurable listings [I09, I19]

Capability	Status	Scope and evidence
Completed checkout and fulfilment	Partially verified	Entry found; no transaction performed
Implements and attachments	Verified present	Product options and public listings [I06, I08, I19]
Serial-linked electronic parts catalogue	Not publicly discoverable	No public NL/global catalogue journey verified
Exploded parts diagrams	Not publicly discoverable	Private or licensed catalogue cannot be excluded
Parts order and fulfilment	Partially verified	Dealer/distribution descriptions; US portal claim [I20, I21, M10]
Service booking	Partially verified	Dealer contact route; no calendar booking established [I20]
Warranty policy	Verified present	Netherlands policy page [I25]
Warranty registration intake	Verified present	Dutch owner dealer machine and invoice form; processing not tested [I31, I32]
Warranty claims processing	Unclear / requires direct confirmation	No private claim workflow inspected
Machine registration intake	Verified present	Public Dutch warranty form collects machine identity [I31]
Machine ledger and service history	Unclear / requires direct confirmation	Public intake does not establish an accessible machine record or history
Dealer-only login entry	Verified present	Germany; Romania DMS/IBIZ links [I10, I11]
Dutch dealer portal functions	Unclear / requires direct confirmation	Authorised walkthrough needed
Customer support	Verified present	Public dealer, phone and email routes [I20]
Brochures and price documents	Verified present	Public model/document links [I18, I21, I26]
Workshop and operator manual coverage	Unclear / requires direct confirmation	Download centre content required sign-in
Supported public API	Not publicly discoverable	No documented catalogue, stock or order API established

Priority actions from the Dutch audit

These priorities are analyst recommendations based on the public evidence. Priority describes the order of validation and correction, not a quantified return or an agreed delivery schedule.

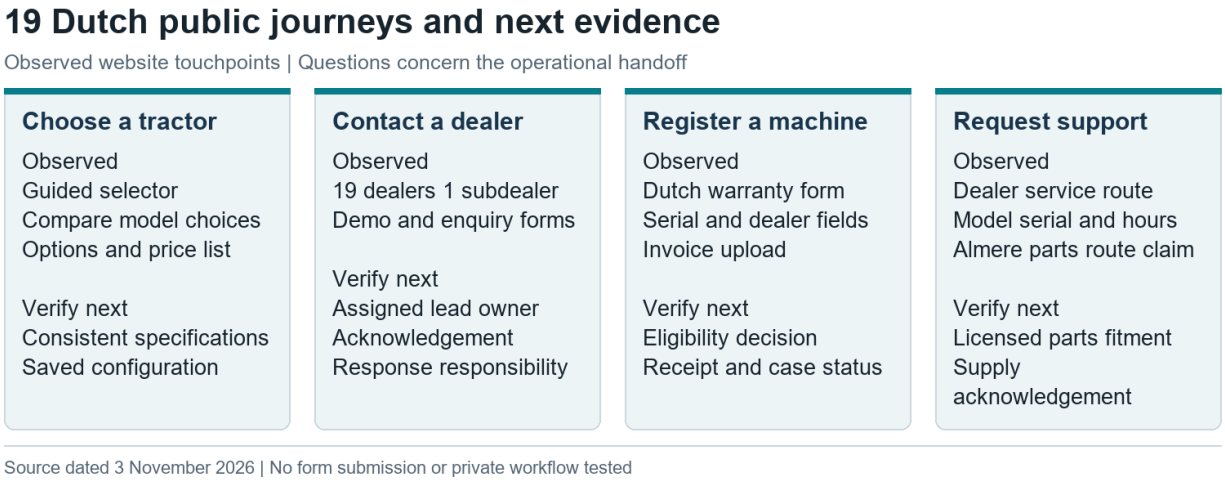

Priority and finding	Recommended action and proposed owner	Evidence required to close
First Demo follow-up copy remains unfinished [B28]	Importer sales and website owner agree recipient, acknowledgement and response responsibility	Approved copy plus an authorised test received by the correct person
First Selector accepts zero-width records [B25]	Product data owner tests width filters and prevents unknown dimensions from implying fit	A reviewed test set with known widths and unknown-value cases
First Warranty guidance has unresolved conditions [I31, I32]	Warranty owner separates intake, provisional registration, extension approval and claims	Confirmed policy and tests for no plate, missing evidence and correction

Priority and finding	Recommended action and proposed owner	Evidence required to close
Next Specifications differ across channels [B35]	Product and commerce owners reconcile variant and source revisions	Signed-off data record used consistently by discovery and shop
Next Current pricing and supply need authority [M12, I38]	Commercial and parts owners define validity, stock timestamps and dealer entitlements	One approved quote and one acknowledged parts request traced to source

The warranty form says an owner may leave the licence plate blank while the extension page describes a valid Dutch plate condition. These may concern different stages; the distinction needs clarification rather than an assumed rejection rule. The form also describes HEIC uploads while its public file-input acceptance list differs. Confirm supported formats through an authorised acceptance test. Neither observation proves that submitted registrations fail. [I31, I32]

Consequences for the four workstreams

Workstream	Dutch evidence changes the proposed scope	First demonstration to request
Dealer Portal	Reuse public enquiry demo and registration routes; show their next action in one workspace	Follow a consented enquiry from model selection to dealer receipt and response
Parts Intelligence	Dealer-assisted identification and Almere route are published; catalogue access is still a dependency	Trace a real serial to an approved part and supply acknowledgement
Agentic Commerce	Selector comparison options and prices already provide discovery; data quality must be resolved before AI advice	Answer reviewed tasks with model variant sources unknown values and dealer escalation
Dealer Onboarding	Public dealer-interest intake exists; main/subdealer roles need distinct entitlements	Show one applicant through agreement training first-order access and suspension

Dutch public journeys and operational evidence | Evidence map or proposed design as labelled

Interpretation. A configured form and an ecommerce cart solve only parts of the lifecycle. The strongest next question is whether the chosen dealer receives structured requirements, a reproducible configuration and an accountable next action. That question must be answered by a controlled test and private-system walkthrough.

7 Dealer ecosystem and customer journeys

The customer journey begins with a task: mowing, material movement, maintenance or another defined use. Public discovery should retain that context through model selection, configuration and dealer

discussion. The dealer then validates fit, conditions, delivery and support. After delivery, the machine identity should connect the owner to correct documentation, maintenance and parts.

Proposed connected journey. Capture requirements with a versioned configuration; create a consented enquiry; assign an eligible dealer; acknowledge ownership; prepare a human-approved quote; preserve order and delivery references; register machine identity where authorised; link future parts/service requests to that machine. Each state needs a responsible organisation and a visible exception route.

For a parts request, the commercial journey is different. A customer may know only a symptom, photograph or model. The dealer must establish machine and component identity, validate a candidate against build/serial applicability, confirm supply and decide how to handle ambiguity. The architecture should support a request with missing information rather than invent a definitive part.

For a new dealer, the customer is the applicant business. Submission begins qualification; it does not confer territory, credit, warranty authority or wholesale prices. Readiness requires completed approvals, agreements, training and tested access. An applicant status page can reduce chasing even if approvals remain human decisions.

03 Dealer journey and validation needs

Evidence and proposals are separated in the report

Stage	Observed touchpoint	Hypothesis to test	Proposed response
Discover	Selector and model pages	Repeat requirement capture	Save requirements to lead
Quote	Configured enquiry	Rekeying or price checks	Versioned quote workspace
Deliver	Dealer handoff	Registration fragmentation	Machine record and checklist
Maintain	Dealer service route	Parts identification delays	Serial and diagram workflow
Expand	Dealer interest form	Approval status chasing	Tracked approval and training

Solis workflow hypotheses require dealer observation | No interviews claimed

Dealer journey | Evidence map or proposed design as labelled

Proposed service responsibilities

ITL provides product authority and confirms which brand systems can be reused. The importer owns the local coordination decision after its legal mandate is verified. Dealers own customer follow-up and service execution within their contracts. A central support team handles unassigned leads, identification ambiguity, unavailable stock feeds and failed system handoffs. Responsibility must remain explicit when a workflow spans organisations.

8 Evidence backed dealer needs and pain points

Public evidence supports investigating parts, technical support, returns and warranty administration. It does not establish how often Dutch Solis dealers experience difficulties or that current tasks are manual. The following evidence and hypotheses must remain separate.

Concern	Evidence and scope	Consequence to test with Solis dealers
Parts and support reliability	NAEDA survey overview includes availability, returns, technical support and warranty [B17]; North America	Identification time, delayed work, lost orders and escalation frequency
Dealer readiness	Industry checklist covers territory, stock, tools, training and reimbursement [B18]	Missing readiness evidence, approval delays or first-order access failures
Repeated inspection administration	AGCO describes digital/offline PDI workflow [B07]; benchmark	Whether Dutch delivery records are re-entered and whether this causes errors
Catalogue-to-commerce mismatch	DMS documentation handles catalogue parts absent in local records [B11]	How unmatched parts are resolved and whether selections are lost

Concern	Evidence and scope	Consequence to test with Solis dealers
Mixed local Solis experience	One self-described US dealer critical and one owner positive [B19, B20]; identities unverified	Market, model and dealer differences; no general shortage conclusion

Unverified manual-work hypotheses. Dealers may retype configured enquiries into quotes, seek parts confirmation through email/phone, chase order status, submit warranty evidence in more than one place, and request onboarding updates. Each is a hypothesis. Public forms and contact routes do not prove the back-office method.

Direct research plan

Recruit a purposive pilot of six to eight Dutch dealers covering volume, tenure, workshop size and geography; importer sales, parts, warranty, finance and IT; two recent applicants and two owners if available. These are proposed research counts, not a representative statistical sample. Observe a recent enquiry/quote, unidentified-part request, backorder, return, delivery inspection, warranty case and first-order onboarding.

Collect redacted records and timestamps. Distinguish active work from elapsed waiting. For each handoff, record actor, system, information supplied, missing fields, repeated entry, exception reason, outcome and avoidable cost. Ask which existing tools work well and whether a proposed capability duplicates them. Confirm findings with participants before prioritising development. No interviews are claimed in this report.

9 Dealer Portal research and proposed capabilities

04 Four workstreams and investment tests

Evidence and proposals are separated in the report

Workstream	User result	Critical dependency	First measurement
Dealer Portal	One queue for daily work	Existing portal and DMS scope	Task time and adoption
Parts Intelligence	Correct part with evidence	Licensed serial fitment data	Identification and return rate
Agentic Commerce	Useful answer and handoff	Authoritative source access	Accuracy and qualified leads
Dealer Onboarding	Approved and ready dealer	Contract authority and roles	Ready-for-first-order time

Proposed capability model | Priority reflects dependencies, not a fabricated score

Four workstream comparison | Evidence map or proposed design as labelled

Kubota Europe's public directory is a useful operating pattern: a permissioned portal links sales, training, technical, maintenance, warranty and parts tools. AGCO Tech Connect demonstrates machine-linked inspection, technical cases and mobile evidence. DMS documentation for Deere interfaces shows that quotes, parts transactions and warranty information may cross existing systems. These are documented benchmarks, not proof of Solis's systems or universal competitor deployment. [B01, B07, B10]

Proposed concept. Make the Dealer Portal a workspace that preserves identity, context and the next action across existing applications. Start with a task queue, authorised links, structured requests and relevant source documents. Avoid replacing the importer ERP, warehouse system or dealer accounting application without a specific business reason.

Capability	Dealer problem it addresses	Phase and acceptance evidence
Lead and saved configuration context	Repeated requirements capture or lost option choices	Pilot if observed; dealer can reproduce source configuration
Customer and machine references	Difficulty linking service to installed equipment	Pilot with permissioned sample and duplicate handling
Quote draft and approval	Version confusion or unauthorised prices	Later; approved price source and commercial authority

Capability	Dealer problem it addresses	Phase and acceptance evidence
Order and delivery status	Repeated status calls	Later; authoritative acknowledgement and timestamps
Registration and PDI	Missing handover records	Reuse Dutch intake first; record ownership and processing demonstrated [I31]
Parts identification and requests	Ambiguous fitment and manual handoff	Pilot within licensed model scope
Service and warranty cases	Missing evidence and unclear responsibility	Reuse/integrate; current process demonstrated
Documents and training	Difficulty finding current authorised guidance	Early; revision and role visibility tested
Notifications and dashboards	Missed tasks or uncertain workload	Early task alerts; dashboards follow trusted events

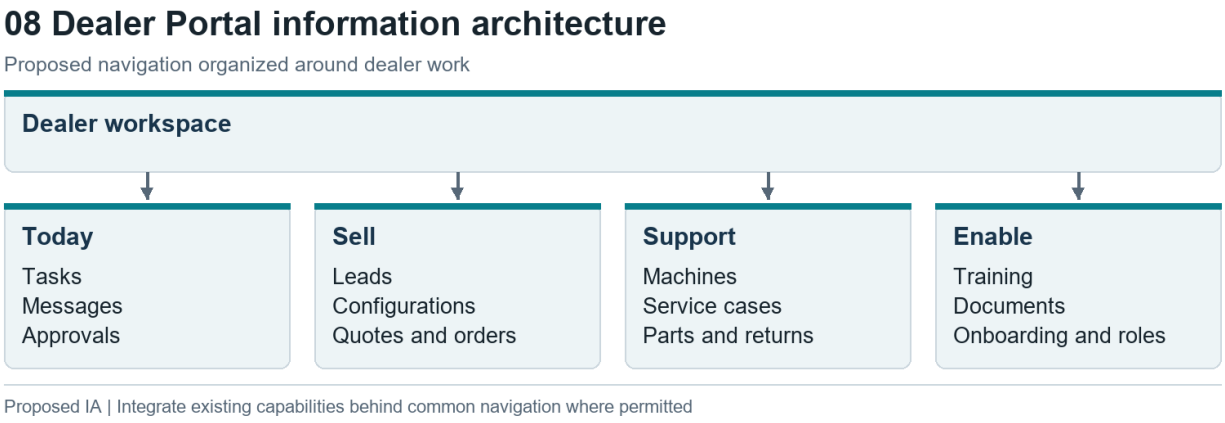

Roles and permissions

An applicant sees its own evidence and status. A dealer principal manages its staff and commercial approvals within assigned scope. Sales staff see permitted leads, configurations and quotes. Parts staff see licensed catalogue and authorised availability/prices. Technicians see machine/support data relevant to their work. Importer operations manage exceptions and distribution; network development manages qualification; finance/commercial owners approve credit and price entitlements; ITL product/support owners govern technical authority. Administrators manage identity without automatic rights to every commercial record.

Permissions should combine organisation, market, territory, role, contract status and record relationship. A suspended dealer must lose transaction rights promptly. A technician should not inherit dealership-wide margin visibility. Delegated access, staff departure and dealership transfer need explicit workflows.

Major workflow

A configured enquiry enters the authorised queue with consent and source revision. The dealer accepts ownership or returns it with a reason. A quote draft references the approved configuration and price version. An authorised person reviews terms and sends it. Any resulting order retains the quote reference; delivery adds a verified machine serial where available. Failed integration leaves a visible retry/exception state rather than an apparent successful order. This is a proposed workflow requiring system demonstrations.

Dealer Portal information architecture | Evidence map or proposed design as labelled

10 Parts Intelligence research and proposed capabilities

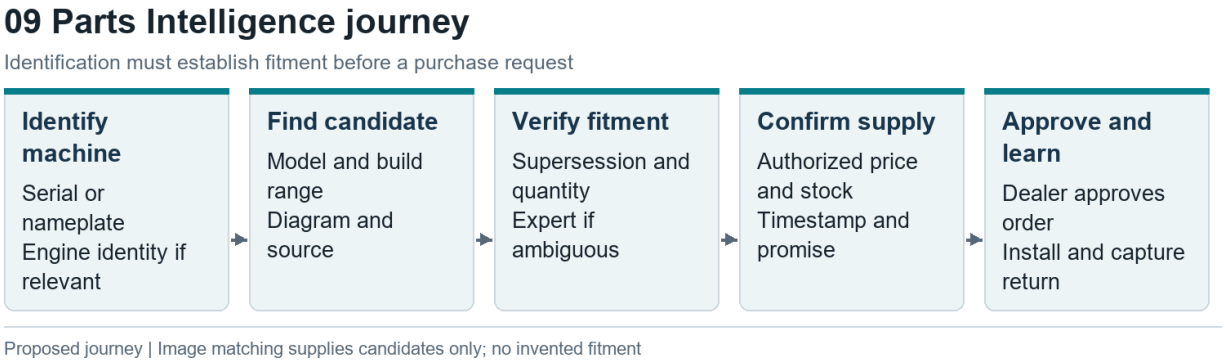

The public Dutch support route is dealer assisted. Solis's global parts page describes a German/Yanmar distribution arrangement, while Dutch information describes an operational route via Almere. These may reflect different network layers, markets or dates. Do not assume a single fulfilment centre or treat a

marketing delivery promise as an available-to-promise guarantee. Confirm who holds each stock item and which system acknowledges the order. [I20, I21, I22]

MyCNHStore documents serial/model discovery, assembly diagrams and fitment. Fendt's parts resources describe exploded views and a catalogue-to-request basket. Kubota Europe separates machine parts from industrial engine parts. These patterns support a machine-first identification experience and show why a catalogue and a commerce system should have a controlled handoff. [B02, B08, B01]

Proposed identification journey

1. Establish full tractor serial, model, market and build date; collect a nameplate photograph when useful.
2. Resolve configuration and fitted assembly; collect engine/component model and serial if relevant.
3. Search licensed text and diagram data, preserving source revision and assembly context.
4. Verify serial applicability, quantity, supersession and approved substitute rules. Escalate uncertain cases.
5. Retrieve authorised price, stock timestamp, reservation status and lead time. Distinguish a stock snapshot from confirmed supply.
6. Obtain dealer approval, send the request/order and wait for authoritative acknowledgement.
7. Record shipment and installation/work-order references where permitted; capture returns and incorrect-part reasons for improvement.

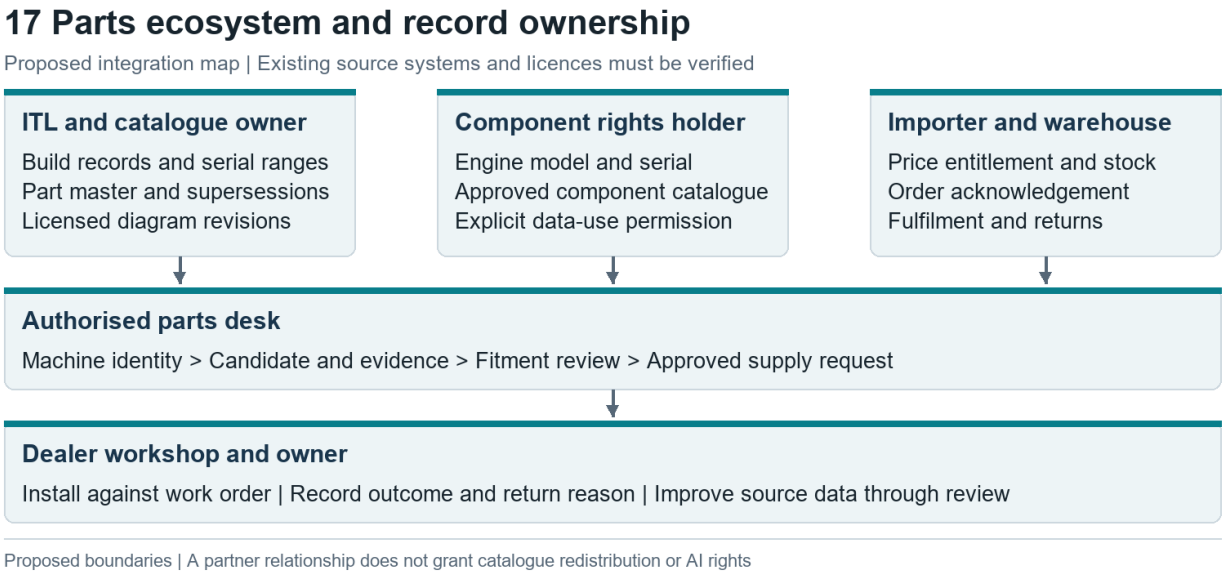

Parts identification journey | Evidence map or proposed design as labelled

Third party engines and catalogue rights

The global S26 page identifies a Mitsubishi engine, and Netherlands material distinguishes component/engine sources across the range. This is model-specific evidence. A Yanmar commercial relationship does not prove that every Solis tractor has a Yanmar engine. DET's Mitsubishi-distributor FAQ requests engine model, serial and application, and describes purchased manuals and restricted ordering accounts. It does not establish DET as the supplier for every Solis machine. [B14, B15, I21]

Permission to view a catalogue is separate from rights to redistribute diagrams, build a search index, use images for matching, embed data in an assistant or train a model. Obtain written coverage and permitted-use terms from ITL and any component/catalogue rights holder. Catalogue access should not be bypassed by scraping.

Proposed data and integration model

Parts ecosystem map | Evidence map or proposed design as labelled

Record	Minimum fields or relationships	Proposed authority to confirm
Machine and build	Serial, model code, market, build date, configuration, component identities	ITL engineering/build records
Catalogue and diagram	Assembly, revision, hotspot, document/source key, licence scope	ITL or licensed catalogue owner
Part and fitment	Exact identifier, descriptions, applicability ranges, quantity, supersession	Approved part master and engineering rules
Implement compatibility	Mounting, PTO, hydraulic, load and market conditions	Approved manufacturer/importer rules
Supply and entitlement	Warehouse, timestamp, available-to-promise definition, authorised price/tax	Importer ERP and warehouse systems, unverified
Order and outcome	Acknowledgement, shipment, work order, return reason, claim reference	Seller, fulfilment and dealer records, unverified

Every imported record needs its source key, owner, version, last update and permitted use. Compatibility is a structured rule requiring evidence; it must not be inferred from similar names or photographs. Genuine/aftermarket origin should be explicit, and any approved substitution or warranty implication must come from the applicable commercial policy.

Proposed first release. An authorised parts desk with machine identity, source-linked candidates, fitment status, stock freshness and expert review. Text/OCR and image search can suggest candidates; they cannot establish fitment alone. Add customer self-service and ordering only when catalogue coverage, prices, returns, availability and support responsibilities are proven.

11 Agentic Commerce research and proposed capabilities

The term agentic commerce should describe permissioned action in business systems, rather than any conversational interface. The relevant categories have different evidence and risk requirements.

Category	What it does	Evidence or Solis application
Conventional ecommerce	Catalogue, basket and checkout	AgriXpert public purchase entry [I09]
Rules-based recommendations	Deterministic rules on requirements or history	Dutch selector; Sana documents ERP-driven suggestions [I07, M07]

Category	What it does	Evidence or Solis application
Conversational discovery	Asks questions and explains candidate differences	Proposed Solis requirements capture; no live Solis assistant verified
Retrieval-assisted answers	Answers from approved sources with references	AGCO describes AgBot parts/service assistance [M02]
AI quote drafting	Prepares a draft from authorised configuration and pricing	Proposed, with deterministic validation and dealer approval
AI parts assistance	Extracts identifiers and retrieves candidates	Proposed within licensed catalogue; fitment remains rule/expert validated
System-connected agent	Reads or stages changes through authorised tools	Cat product support; Ajusa implementer case, differing evidence [M03, M06]
Transaction agent	Initiates or executes an order/change	Ajusa implementer reports order creation/modification; no Solis deployment verified [M06]

Deployment evidence and its limits

AGCO describes AgBot integrated with AGCONet for dealer parts/service questions. This is a manufacturer-described capability, not independently measured performance. Caterpillar's March 2026 release describes the off-board assistant as available and the in-cab version as a prototype. Its support page distinguishes guest information and personalised account context. These sources do not prove unrestricted autonomous purchasing. [M02, M03, M04]

Deere's September 2026 JD announcement was discoverable but the original opened as a JavaScript shell. It is retained as limited-access evidence of announced early access, not proof of a general rollout. A named Ajusa implementation case reports SAP-connected order creation/modification with confirmations and audit logs; this is implementer-reported production, without customer-side confirmation or verified outcome metrics. Neither example supplies a Solis ROI assumption. [M05, M06]

Proposed Solis concept

Start by collecting work requirements, dimensions, terrain, desired implements and the market. Retrieve current authorised model and option facts. Explain a shortlist with page/specification references and unresolved requirements. Preserve the conversation and requirements in a structured dealer handoff, subject to the user's consent and the dealer's permissions.

With a verified catalogue, assist parts-counter staff in finding candidates and missing identifiers. With authorised price feeds, prepare quote drafts that retain source price revision, tax treatment, configuration, validity and approver. Dealer/stock-aware routing requires territory, capacity and availability data; a public dealer list alone cannot support a stock promise.

Now, subject to content rights. A controlled prototype can answer from a small curated public/document set, collect requirements and prepare a staff-reviewed handoff. **After integration.** Read authenticated machine/order data, check prices and availability, stage quote/order drafts. **After separate validation.** Permit narrowly bounded writes with approval, acknowledgement, retries and rollback/compensation rules. Autonomous discounts, credit changes, warranty awards, unverified substitutions and binding orders should not be in the initial scope.

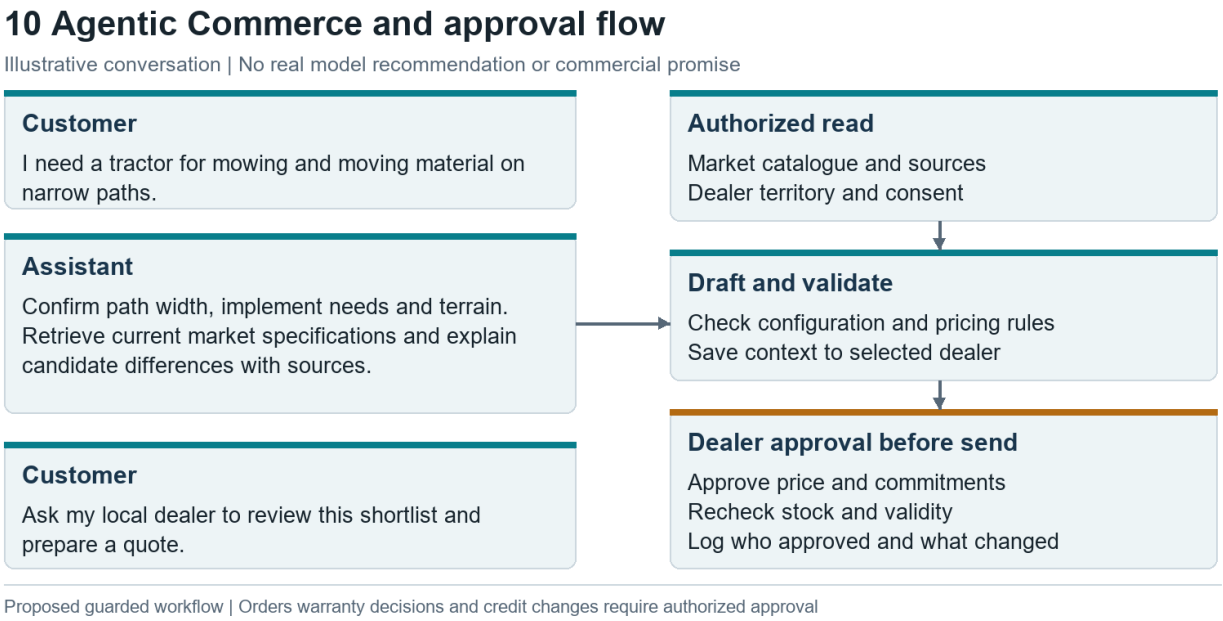

Guardrails and release evidence

Use an authoritative source allowlist with document revisions. Filter retrieval by organisation, market and role before model access. Treat retrieved text, uploads and customer messages as data, never as instructions to override permissions. Tools must independently enforce identity, entitlements and allowed actions. Separate read, draft and execute permissions.

Require authoritative fitment evidence before presenting a part as compatible. If machine identity or serial range is unresolved, ask for information or escalate. An internal model confidence score is insufficient. For a draft quote, recheck pricing and availability at approval time and record the exact content approved.

Use idempotent transaction keys, authoritative acknowledgements, complete audit trails and visible failure states.

Test grounded answer accuracy, wrong-model contamination, unsupported pricing, prompt injection, cross-dealer access, stale data, failed acknowledgements and approval bypass. Retain only necessary conversation data under agreed access and retention rules. Staff must be able to correct sources, stop the assistant and take over the case. Targets should be agreed from a reviewed test set, with all consequential errors investigated before wider release.

Agent conversation and approval | Evidence map or proposed design as labelled

12 Dealer Onboarding research and proposed capabilities

Solis World's form captures contact and business-interest fields and says the team will follow up. The Dutch dealer-interest route is a contact form, separate from the warranty-registration form. The directory also distinguishes one subdealer under a main dealer, so applicant status should not automatically confer wholesale or warranty rights. [I31, I38] These are verified intake capabilities, without public proof of end-to-end qualification or provisioning. [M01, I23]

Historical CNH documentation provides an explicit precedent for network, sales, service, parts, finance and legal approvals, followed by contract and portal credentials. It is a 2016 description and cannot establish today's CNH process. Kubota Engine America's programme distinguishes service authorisation levels, reinforcing that accounts and commercial privileges should reflect verified capability. An industry dealer checklist covers territory, stock, tools, training and warranty terms. [M08, M09, B18]

Proposed end to end journey

Stage	Dealer action and evidence	Internal owner and output
Apply	Legal business details, contacts, territory interest, product experience and service profile	Network lead checks completeness and duplication; acknowledgement/status
Qualify	Facilities, workshop equipment, trained staff, references and proposed business plan	Network/sales assess territory and capability; request missing evidence
Review commercial terms	Authorised business/financial information and proposed stock/service commitments	Finance, service, parts and commercial owners record approval or conditions

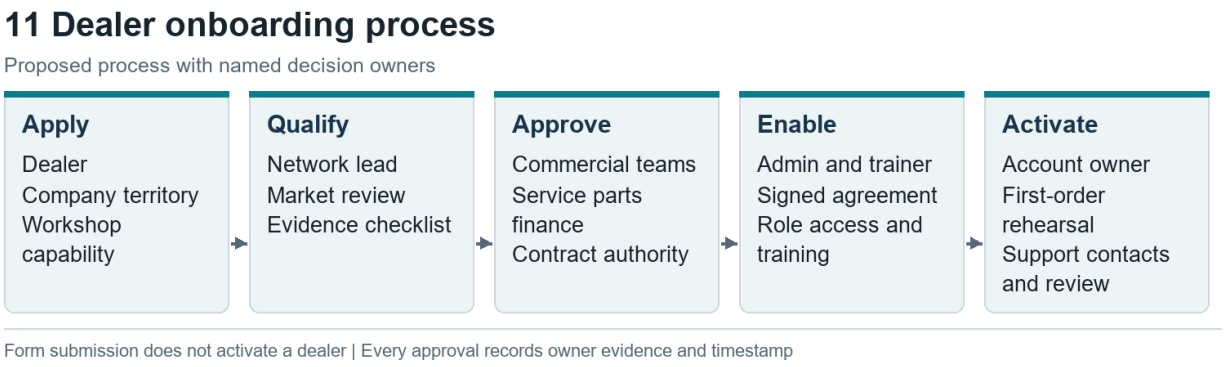

Stage	Dealer action and evidence	Internal owner and output
Agree	Review market-specific contract, territory, returns, reimbursement and obligations	Authorised legal/commercial signatory approves and executes agreement
Train and provision	Named staff, roles and required learning	Training owner certifies readiness; admin grants approved scope and verifies access
Activate	Test parts request, quote/order access and support contacts	Account owner signs first-order readiness; unresolved conditions remain visible
Enable and review	Keep staff, capability and required training current	Account owner monitors outcomes; changes/suspensions update access

Notifications should name the pending action, owner and due/review date without exposing financial documents to unrelated roles. Missing evidence returns to the applicant with a reason. Rejection, withdrawal, duplicate application and conditional approval need explicit states. A signed agreement should not automatically grant warranty authority if service certification is incomplete.

Required data. Applicant legal entity, registration evidence, authorised signatory, facilities, staff skills, territory, expected activity, credit/stock decisions, approvals, contract version, training records and role scope. Exact financial and compliance checks must come from the importer/ITL policy and applicable law; this report does not invent a universal checklist.

Integration. Reuse business verification, signing, identity and learning services where available. The workflow coordinates evidence and readiness, while authoritative decisions remain with their owners. Provisioning should be repeatable, least-privileged and reversible; failed account creation leaves the dealer pending, not active.

Geography decision. Design identifiers and policy configuration so reuse remains possible. Do not fund a multi-country rollout until a second importer demonstrates compatible needs and grants local data/process rights. Contracting entities, language, territories, warranty, prices and catalogue licences may differ.

Dealer onboarding process | Evidence map or proposed design as labelled

13 Competitor benchmarking

The strongest public benchmarks demonstrate connected specialist tools, machine identity and controlled transaction handoffs. They do not support copying a global manufacturer's entire platform into a smaller importer network.

Benchmark and market	Verified description	User problem and relevance to Solis	Limitation
Kubota Europe	Permissioned SSO directory links commercial, training, technical, warranty and catalogue tools [B01]	One identity and context across existing applications	Underlying applications not entered

Benchmark and market	Verified description	User problem and relevance to Solis	Limitation
CNH Case IH catalogue	Serial/model/part discovery, assembly diagrams and fitment guidance [B02]	Correct identification before price/order	Dealer participation and model coverage vary
MyCNHStore North America	Equipment-based parts discovery and dealer-specific purchase journey [B03]	Connect catalogue to selling dealer	No EU availability inference
Case IH PRO and CNH support	Sales-network tools/training description and dealer-ID logins [B04, B05, B06]	Authorised sales and technical resources	Login does not prove hidden workflow details
AGCO Tech Connect	PDI, machine lookup, incidents, knowledge and mobile evidence [B07]	Link delivery/service to machine; reduce evidence loss	Solis workflow impact unmeasured
Fendt parts resources	Parts Books, diagrams and basket/request handoff [B08]	Workshop identification and preserved selections	Emailed basket is not executed order
AGCO customer service	Registered machine information and permissioned support resources [B09]	Owner documentation linked to machine	Coverage and diagnostic rights constrained
Deere via DMS documentation	Licensed interfaces for quote, parts, warranty and equipment processes [B10, B11]	Integrate existing dealer transaction systems	Vendor documentation; deployment not universal
IntelliDealer MyDealer	Customer invoice/equipment/service/parts/quote functions [B12]	Reuse DMS customer access where installed	Vendor product, not Deere-exclusive
Solis regional evidence	German login, Romanian DMS links and US portal description [I10, I11, M10]	Investigate in-brand reuse before external build	Netherlands scope unknown

05 Official benchmark capabilities

Evidence and proposals are separated in the report

Platform	Verified public description	Lesson for Solis	Boundary
Deere	Parts lookup and service data	Connect machine to parts	Market and login vary
CNH	Catalogues and diagrams	Fitment before ordering	Check serial coverage
AGCO	Tech Connect dealer workflow	Mobile service evidence	No Solis transfer implied
Kubota Europe	SSO technical and parts tools	Reuse connected systems	Permissions by role
Solis regions	German login US portal claim	Inspect existing assets first	NL access remains open

Official manufacturer documentation | Full evidence and market limits in report

Competitor capability comparison | Evidence map or proposed design as labelled

Lead management, saved configurations, order tracking, registration, warranty, service, inventory, notifications, dashboards, roles and DMS integration should all be reviewed in the Solis walkthrough. Public evidence does not justify marking every competitor as having every feature. For unsupported features, request a current demonstration rather than fill a comparison grid with assumptions.

Transferable lessons. Give every service case and parts request a machine reference. Keep catalogue identity through the cart/request handoff. Make authentication and market entitlements explicit. Handle unmatched part records and offline evidence as operational exceptions. Measure whether a connected workflow removes dealer effort before broadening the scope.

14 Financial analysis of machines parts and after sales

How to read these numbers. Revenue is money from sales, not the number of tractors sold. In a table labelled USD million, 8,711.0 means USD8,711 million, or USD8.711 billion. That particular figure is AGCO's 2023 tractor sales revenue, not Solis revenue. Gross profit is revenue less direct costs; it is not net profit. INR crore means ten million Indian rupees per crore. The workbook now explains these units and separates company figures from the hypothetical business-case example. [F02]

ITL and Solis evidence

ICRA reproduces audited financial indicators for ITL, but the full accounts were not obtained. ICRA uses operating income as a revenue measure here, not operating profit; PAT means profit after tax. Its consolidated operating income increased 5.66% from FY2024 to FY2025. The rating analysis and consolidation annexure describe finance-company scope differently; the underlying statements are needed to reconcile this. FY2026 audited figures, Solis brand/geographic turnover and machine/parts splits were not established. Non-disclosure is not zero. [F01]

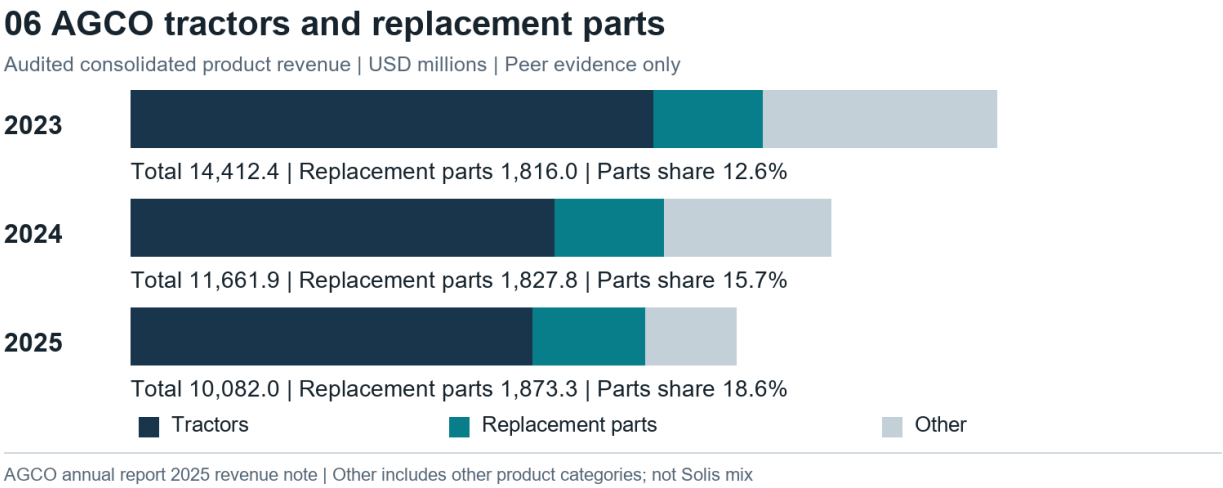

Reporting entity and period	Metric	Amount and units	Interpretation
ITL consolidated FY2024	Revenue labelled operating income / PAT	INR9,485.4 / 1,740.3 crore	Rating agency reproduction; all relevant group operations
ITL consolidated FY2025	Revenue labelled operating income / PAT	INR10,021.8 / 1,780.9 crore	Not Solis or Netherlands turnover
ITL standalone FY2025	Revenue labelled operating income / PAT	INR9,789.7 / 1,818.8 crore	Different entity perimeter; do not mix with consolidated
ITL FY2025 exports	Tractor volume	Approximately 30,000; about 20% of total volume	Reported by ICRA; not Solis-only or EU-only
Solis Netherlands	Machines versus parts/service	Not established	Local invoices and management accounts required

Audited OEM comparison

AGCO's 2025 annual report separately discloses tractors and replacement parts. The most defensible chart is its own multi-year consolidated product mix, retaining residual categories. Replacement parts are not a combined parts-and-service measure. [F02]

AGCO calendar year USD million	Tractors	Replacement parts	Other product revenue	Consolidated sales	Parts / sales
2023	8,711.0	1,816.0	3,885.4	14,412.4	12.60%
2024	7,059.3	1,827.8	2,774.8	11,661.9	15.67%
2025	6,693.0	1,873.3	1,515.7	10,082.0	18.58%

Other product revenue = total minus tractors minus replacement parts; it includes grain systems and other machinery. Parts share = replacement parts / consolidated sales. The increase in share partly reflects declining total sales and the 2024 G&P divestiture; it is not evidence of digital causation. These are group figures, not a single brand, region or Solis. [F02]

Machine and parts revenue mix | Peer evidence only

Dealer economics comparison

Titan Machinery is a useful separately labelled dealer-group benchmark. Its fiscal year ended 31 January 2026 covers agricultural and construction equipment and multiple geographies. Revenue and gross profit have different denominators and must remain separate. [F03]

Titan FY2026 USD million	Revenue	Share of revenue	Gross profit	Gross margin
Equipment	1,774.535	73.11%	129.330	7.3%
Parts	428.261	17.64%	132.515	30.9%
Service	177.910	7.33%	109.459	61.5%
Rental and other	46.401	1.91%	11.252	24.2%
Total	2,427.107	100.00%	382.556	15.8%

Parts plus service revenue share = (428.261 + 177.910) / 2,427.107 = 24.98%. Their gross-profit share = (132.515 + 109.459) / 382.556 = 63.25%. Gross profit precedes operating expenses, and service labour accounting affects comparability. Dealer retail margins and manufacturer net sales are not interchangeable. Rounded category shares may not sum to 100%. [F03]

Dealer revenue and gross profit comparison | Evidence map or proposed design as labelled

Inference. After-sales deserves equal attention in discovery because recurring owner support can matter economically beyond its revenue share. This does not establish the corresponding Solis margin, installed base, retention rate or investment priority. It establishes a reason to obtain those inputs.

Other peer disclosure boundaries

Entity and financial year	Reviewed scope and disclosed amount	Parts comparison outcome
CNH 2025	Agriculture net sales USD12,390m; Industrial net sales USD15,346m	Reviewed disclosures do not isolate parts revenue [F04]
Deere FY2025	Equipment net sales USD38,917m including parts/technology	No isolated comparable parts denominator established [F05]
Kubota 2025	Group JPY3,018,891m; Machinery JPY2,628,618m	Reviewed release does not disclose a parts split [F06]

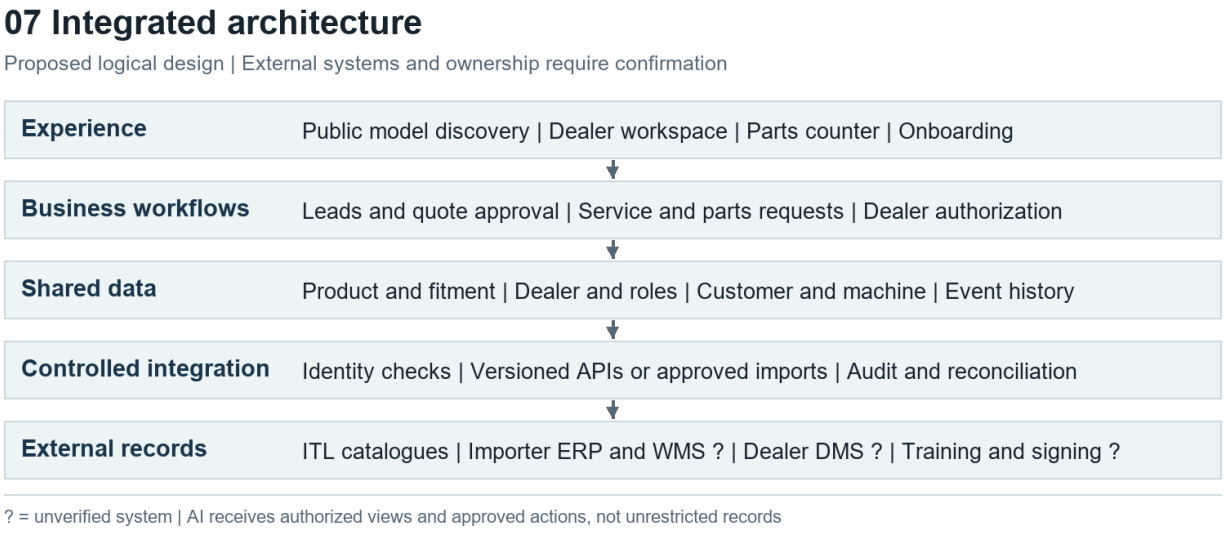

These totals illustrate why a percentage cannot be inferred from segment names. Finance, service, industrial engines, construction and other products may be included differently. No currency conversion or cross-company synthetic parts average is used.

Information required for a Solis case

Obtain 24 months of invoice-line records separating machines, genuine parts, implements, service labour and warranty reimbursements. Include cost/margin definitions, dealer, customer and machine keys, market, channel and returns reasons. Reconcile to ledger totals. Add installed machines by model/age, active dealers, parts demand lost or deferred, availability/fill rate, labour handling time, quote outcomes and onboarding records. Confirm whose benefit is being measured: manufacturer, importer or dealer. Avoid adding the same channel margin more than once.

15 Integrated future state ecosystem and architecture

The four workstreams should share records and permissions while preserving authoritative systems. Onboarding establishes dealer identity and entitlement. The portal uses those rights to present tasks and records. Parts Intelligence consumes licensed machine, catalogue and supply data. Agentic Commerce reads the same authorised information and stages actions through the same approval workflows.

Integrated platform architecture | Evidence map or proposed design as labelled

Proposed boundaries and ownership

Data or workflow	Proposed system of record boundary	Unresolved evidence
Engineering products, build and fitment	ITL or authorised catalogue source	Actual export/API, revision and rights
Local options, price and tax	Approved importer/commercial system	Authority, version and dealer net/retail separation

Data or workflow	Proposed system of record boundary	Unresolved evidence
Stock, orders and fulfilment	Seller ERP / warehouse system	Names, acknowledgement, reservations and refresh
Dealer identity and contract	Named network authority; identity service executes access	Legal signatory, territory and suspension policy
Customer and work order	Permitted dealer CRM/DMS or agreed shared service	Controller rights and cross-dealer visibility
Warranty	Applicable manufacturer/importer warranty system	Registration, claims, evidence and decision authority
Search and assistant	Derived authorised index, not the authoritative ledger	Retention, source revocation and evaluation
Cross-system task history	Integration/workflow service with source references	Owner, event model and reconciliation

Unknown external systems are marked with a question mark in the architecture. The diagram does not claim Solis uses a specific ERP, cloud or DMS. Support approved deep links and controlled imports as initial integration options; use supported APIs for transactional work when available. A public web endpoint is not automatically a supported business interface.

Integration requirements

Define stable source identifiers and cross-reference mappings before combining data. Use a versioned product/configuration record, durable dealer and machine IDs, timestamped stock snapshots and explicit order states. Maintain correlation IDs across portal requests and authoritative acknowledgements. Use idempotency to prevent duplicate orders and reconciliation to identify missing or contradictory updates.

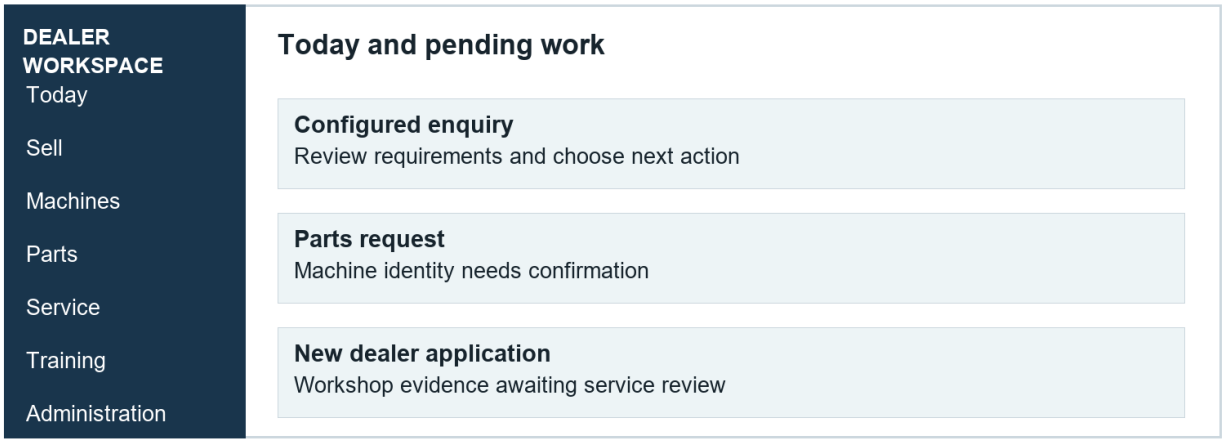

Separate customer consent and privacy preferences from contract permissions. Filter records before exposing them to the assistant or user. Log access and decisions proportionately. Provide operational ownership for failed imports, stale feeds, identity conflicts, source revocations and unavailable systems. An integration layer without staffed exception handling does not complete a dealer workflow.

16 Proposed UX information architecture and wireframes

The proposed navigation is Today, Sell, Machines, Parts, Service, Training and Administration. It organises work around dealer tasks while allowing links to existing specialist systems. The first screen should answer what needs attention, who owns it and what information is missing.

15 Dealer Portal task workspace

Illustrative wireframe | No real dealer records parts prices or stock

Proposed screen | Permission and freshness checks precede commercial commitments

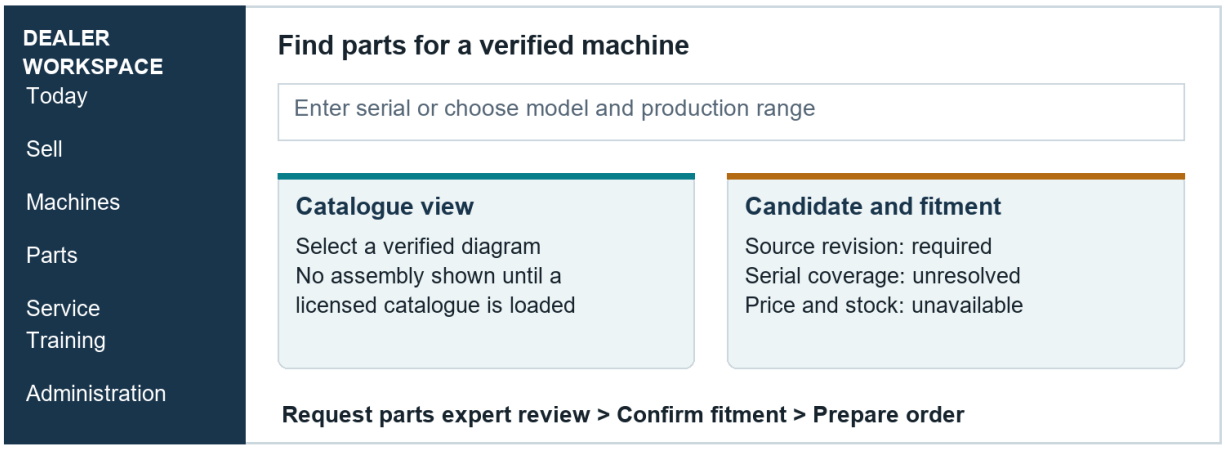

Dealer workspace wireframe | Evidence map or proposed design as labelled

Proposed Today screen. Each row has task type, customer or machine reference when permitted, responsible person, status, next action and source-system link. An unresolved machine identity or failed handoff is visible. Counts and performance tiles should appear only after event completeness is established; mock performance data would distract from validation.

Proposed Sell screen. A lead retains work requirements, market and source configuration revision. Dealers can inspect options and uncertainties, ask for missing information and prepare a draft. Price entitlements, taxes, validity and approval are explicit. The system records which quote was sent rather than overwriting the previous version.

16 Parts Intelligence example interface

Illustrative wireframe | No real dealer records parts prices or stock

Proposed screen | Permission and freshness checks precede commercial commitments

Parts desk wireframe | Evidence map or proposed design as labelled

Proposed Parts screen. Put machine identity above search. Show licensed catalogue/diagram context beside candidates and fitment status. Use clear unavailable/stale states for stock and price. A request for expert review remains available when a serial is missing. Do not substitute a model-level guess for a verified compatible part.

Proposed Onboarding screen. Present the applicant's pending evidence, review stage, named contact and next action. Internal users see only their authorised review documents. Account readiness should expose incomplete training or provisioning even after commercial approval.

These are original wireframes rather than reconstructions of private Solis systems. They use illustrative task text and contain no real dealer records, catalogue part numbers, availability, prices or ROI. Mobile design should prioritise serial capture, documents and service evidence; desktop design should support

comparison, quotes and parts-counter work. Accessibility, language, field connectivity and actual device use require pilot testing.

17 Business value and transparent scenario framework

A Solis-specific quantified business case cannot yet be produced. The financial workbook separates sourced historical data from illustrative assumptions and leaves actual Solis inputs blank. Missing inputs remain unavailable, rather than becoming zero benefit or a fabricated return.

Driver	Formula	Required local evidence
Dealer capacity	Annual eligible tasks x adoption x minutes saved / 60	Task count, observed time and task mix
Capacity equivalent	Capacity hours x loaded hourly cost	Verified cost; cash savings need staffing/overtime decision
Incorrect-part costs avoided	Eligible orders x adoption x return-rate reduction x avoidable cost	Fitment-related return causes and non-overlapping cost
Retained parts contribution	Recoverable lost demand x attributable capture change x net basket x contribution margin minus added costs	Lost demand, causal change and invoice margin
Machine contribution	Qualified leads x attributable conversion change x incremental contribution minus variable cost	Comparable lead cohorts and sold-unit contribution
Onboarding capacity	Applicants x adoption x administrative hours saved x cost	Internal work time, excluding work shifted to another role
Net cash benefit	Attributable cash cost avoided + incremental contribution minus run/change costs	Approved cost, timing and accountable benefit owner

Illustrative normalised example

The following assumptions are examples per 1,000 eligible annual requests, not Solis data or forecasts. The illustration assumes one eligible parts order per identification request; an actual case must separate these volumes if they differ. The illustrative hourly cost is EUR35. The example wrong-part return rate starts at 8%; avoided-return cost is EUR40 of non-labour cost. Productivity time excludes return handling so the two example benefits do not count the same labour twice.

Illustrative scenario	Low	Base	High
Adoption	30%	60%	80%
Minutes saved per adopted request	5	10	15
Return-rate reduction	1 percentage point	2 percentage points	3 percentage points
Capacity hours	25	100	200
Capacity equivalent EUR	875	3,500	7,000
Avoided returns	3	12	24
Avoided non-labour cost EUR	120	480	960
Combined gross opportunity equivalent EUR	995	3,980	7,960

Combined opportunity is before implementation and operating costs and includes capacity value that may not become cash savings. It is not ROI, payback or revenue uplift. At base adoption, each extra minute saved adds 10 hours, equivalent to EUR350; each extra percentage point of avoided returns adds six returns, equivalent to EUR240. These sensitivities follow the example formulas. They should guide what to measure, not set a budget.

14 KPI and business value model

Evidence and proposals are separated in the report

Outcome	Measurement	Value formula	Control
Dealer productivity	Median active task minutes	Tasks x minutes saved / 60	Observe same task mix
Correct part first time	Fitment-related return rate	Orders x rate reduction x cost	Separate other returns
Lead conversion	Qualified lead cohort wins	Leads x incremental win x margin	Avoid attribution overlap
Onboarding efficiency	Time to ready for first order	Cases x admin hours saved	Exclude dealer waiting time
Assistant quality	Grounded correct answer rate	Measured benefit less run cost	Track harmful errors too

Proposed measurement | Baselines unknown; time saved is capacity unless cash costs fall

KPI and value framework | Evidence map or proposed design as labelled

18 Implementation options and phased roadmap

Option assessment

Option	Appropriate when	Main tradeoff and evidence gate
Extend ITL/importer tools	Existing services cover core tasks and allow local configuration	Dependence on product roadmap; inspect rights, support and cost
Integrate a dealer workspace	Transactions exist but identity/context are fragmented	Integration and support obligations; prove handoff reliability
Buy a DMS/B2B module	Existing estate or vendor supports required dealer workflow	Fit and licence cost; test real catalogue and entitlement data
Custom build	Distinct measured gaps persist after reuse/vendor assessment	Long-term operating burden; require data rights and benefit case

The sequence below is proposed. Calendar duration, staffing and cost depend on access, catalogue scope and integration complexity. No unsupported delivery date or cost estimate is presented.

Discovery. Confirm legal sponsor; inventory private systems; map current processes; obtain catalogue permissions and sample records; baseline dealer tasks; compare reuse options. Exit with a documented scope, owners and measurable pilot hypothesis. Stop or narrow if authority or data is unavailable.

Connected pilot. Use a bounded Dutch dealer cohort and model/catalogue sample. Preserve configured enquiry context, expose the next dealer action, trial machine-first parts identification and track onboarding evidence/status. Use source-linked assistance only where the content is approved. Exit after users complete real tasks and results reconcile to authoritative records.

Operational rollout. Add approved quote/order integrations and relevant service/warranty links after authoritative pricing, stock, acknowledgements, access control, support and recovery are tested. Resolve pilot failure causes before broadening. Establish support ownership, change control, data-quality monitoring and vendor obligations.

Optional market reuse. Validate one additional importer with different contracts or language. Separate market policy from shared software only where actual differences justify it. A successful Dutch pilot is evidence for a second test, not automatic approval for all ITL markets.

12 Phased roadmap with decision gates

Evidence and proposals are separated in the report

Phase	Deliverable	Gate to continue	Scope limit
Discovery	System walkthrough and baseline	Authority data and pilot access	No rebuild commitment
Connected pilot	Tasks parts lookup onboarding	Measured workflow improvement	NL sample and bounded models
Operational rollout	Approved quote and order links	Reconciliation and support ready	Human approved writes
Market reuse	Configurable importer policies	Second market proves reuse	Separate legal and catalogue rules

Sequence is proposed | Calendar and cost require scoped integration evidence

Phased roadmap | Evidence map or proposed design as labelled

19 Risks data requirements ownership and dependencies

Risk or dependency	Consequence	Mitigation and decision owner
Unresolved legal identity	Wrong sponsor, contract or data authority	Executive sponsor supplies current legal/registry evidence
Hidden existing capability	Duplicate build and conflicting workflows	ITL/importer IT demonstrates current portals and integrations
Missing catalogue/build rights	Unsafe or unlicensed parts service	Parts/product owner agrees rights and validates serial cases
Stale prices or inventory	Unfulfillable quotation or misleading promise	Commercial/operations owner defines freshness and acknowledgement
Model/version inconsistency	Wrong recommendation or incompatible option	Product owner governs market-specific master data and revisions
Cross-dealer data exposure	Loss of trust and unauthorised access	Identity/data owners enforce record-level scope and review tests
AI unsupported answers or actions	Incorrect fitment, price or commitment	Product/security owners gate sources, actions and human approvals
Poor adoption	Capacity benefit fails to materialise	Dealer pilot owners co-design tasks and measure actual use
Unowned integration failures	Requests disappear or duplicate	Operations owner monitors queues and reconciles records
Benefits double counted	Misleading business case	Finance owner separates channel/entity cash and capacity value

13 Risks dependencies and decision gates

Evidence and proposals are separated in the report

Risk	Dependency	Decision gate	Accountable owner
Wrong contracting entity	Legal and registry evidence	Named sponsor and controller	Executive sponsor
Duplicate existing system	Private portal walkthrough	Reuse or replace decision	ITL and importer IT
Incorrect parts	Licensed serial fitment rules	Reviewed fitment test set	Parts lead
Stale commercial promise	ERP stock and price feeds	Freshness and reconciliation	Operations lead
Unauthorized AI action	Identity and approval policy	Access and failure tests	Product and security

Proposed governance | Risk controls must be tested against real records

Risks and decision gates | Evidence map or proposed design as labelled

Proposed data readiness exercise

Ask ITL and the importer for an authorised sample spanning ten real serial-to-part cases, including a build change, engine variation, supersession, backorder, incorrect part and return. Request representative configured enquiries, quotes, orders, delivery inspections, warranty cases and onboarding files with personal information redacted where possible. Ten cases are a proposed starting sample, not proof of catalogue completeness.

For each record, confirm source, owner, identifier, revision, coverage, update method, entitlement and permitted use. Record errors and missing links rather than silently repairing them in a prototype. Determine whether current APIs, exports, deep links or manual controls can support the pilot. Expansion requires evidence across more models and exception types.

Privacy and contractual boundary

Data ownership, permitted processing and catalogue licensing must be documented by the relevant parties. The report proposes minimisation, access control, retention, audit and revocation controls; it is not a legal opinion. Legal reviewers must determine the applicable privacy and commercial obligations before combining customer/dealer data or deploying automated decisions. No assumption is made that public availability grants reuse rights.

20 KPIs and measurement framework

Measure workflow outcomes and failure causes alongside adoption. Establish baselines before a pilot and compare equivalent tasks, models, dealers and seasonal conditions. Use a staged rollout or matched comparison where feasible. Small purposive samples support operational learning, not a statistically proven network-wide uplift.

KPI	Definition and denominator	Proposed owner and collection
Dealer response time	Median and 90th percentile from qualified enquiry received to meaningful dealer response	Sales owner; joined source and dealer timestamps
Configuration handoff completeness	Enquiries with reproducible configuration and required context / eligible configured enquiries	Product/sales; payload checks
Quote handling time	Active work minutes per comparable quote, separated from elapsed customer waiting	Dealer sales; observation and event sample
Correct identification first time	Verified correct initial part selections / reviewed eligible requests	Parts lead; fitment review and order outcome
Fitment-related return rate	Returns caused by identification/compatibility / eligible delivered part lines	Parts/finance; reason-coded returns

KPI	Definition and denominator	Proposed owner and collection
Availability accuracy	Confirmed supply matches the displayed promise / reviewed promises	Operations; snapshot and acknowledgement comparison
Parts demand retained	Fulfilled eligible demand / measured requested demand, including logged lost cases	Parts/commercial; requests linked to orders
Onboarding readiness time	Elapsed complete application to approved first-order readiness; waiting reasons separately	Network lead; stage timestamps
Onboarding administration	Active internal hours per completed applicant and repeated-evidence rate	Network/finance; observation sample
Workflow adoption	Eligible tasks actually completed through workflow / eligible tasks	Product owner; event coverage reconciliation
Assistant grounded accuracy	Correct source-supported answers / reviewed test and live sample	Technical owner; expert-labelled review
Consequential assistant error	Wrong fitment, price, permission or executed commitment, by severity and denominator	Product/security; incident and approval logs
Integration reliability	Acknowledged requests and reconciled updates / requests sent; duplicates and unresolved failures	IT/operations; transaction ledger

Targets are deliberately unset until current performance and acceptable error levels are agreed. A high answer rate is not success if the assistant produces unsupported advice. Increased portal usage is not a benefit unless task outcomes improve. Time saved creates capacity; finance must separately confirm cash effects or incremental contribution.

21 Unanswered questions and stakeholder requests

Executive sponsor and legal owners

Identify the exact organisation Raja calls Solis Structures NL, the project beneficiary and the budget owner. Supply current KvK extracts, group ownership evidence and authorised signatories. Clarify the relationship among ITL's Solis B.V., AgriXpert and DIGO. Identify the dealer agreement counterparty, warranty obligor and data controller for each journey.

ITL and existing system owners

Demonstrate DMS/IBIZ and any other dealer platforms with relevant Dutch roles. Identify product, lead, quote, order, registration, warranty, parts, training and reporting coverage. Provide supported integration methods, entitlement model, change roadmap, support responsibility and reuse costs. Confirm which engineering/build and catalogue data can be licensed and for what uses.

Importer website commercial and operations owners

Show the configured enquiry payload and its dealer handoff; demonstrate whether a saved configuration, acknowledgement and response tracking already exist. Confirm who approves model/options/prices, which price list is effective and how website content is updated. Explain AgriXpert stock labels, stock ownership, warehouse routes via Almere/Germany, order acknowledgement and returns. Identify ERP/WMS/DMS systems without assuming vendor names.

Assign the demo follow-up promise, test the selector with unknown dimensions and reconcile cross-channel S16 variants. Demonstrate Dutch warranty intake through receipt, eligibility decision and correction; distinguish plate-free initial intake from any extension condition. Confirm supported uploads and document handling without assuming the lookup uses AI or an approved vehicle registry integration. [B25, B28, B22, B35, I31, I32]

Parts service and dealer owners

Walk through the proposed serial-to-part sample and recent warranty/return cases. Explain engine identification, supersessions, substitutions, workshop documents and catalogue rights. Show actual tasks and tools before declaring them manual. Supply timing, failure reasons and invoice/return records needed for a local business case.

Network development finance and training owners

Provide applicant stages, qualification standards, territory/credit decisions, agreement templates, required service capability, training and activation policy. Confirm who grants and revokes each role, how staff changes are handled and how a dealer becomes ready for its first order. Provide the ledger and cost definitions needed to separate machines, parts, service and warranty economics.

22 Conclusions and recommendations

The research supports a connected ecosystem opportunity, with reuse and evidence gathering as the immediate actions. Public Netherlands discovery and commerce are sufficiently developed that another selector or storefront needs a specific, demonstrated rationale. Regional portal evidence makes an ITL/importer walkthrough essential before procurement. [I07, I08, I09, I10, I11, M10]

First, establish authority. Resolve the legal sponsor, dealer contracts and data rights. ITL's reported ownership of Solis B.V. and AgriXpert's self-described importer role do not determine which entity can approve every workflow. [F01, I04, I05]

Second, observe and measure. Validate dealer tasks, private systems and catalogue coverage using real records. Treat rekeying, chasing and identification difficulty as hypotheses until observed. Establish entity-specific financial baselines; peer parts economics justify investigation without supplying a Solis percentage.

Third, connect a bounded pilot. Preserve enquiry context, give dealers a clear queue, improve verified parts identification and track onboarding readiness. Use existing transaction systems and catalogue tools where suitable. Keep exceptions visible and decisions with authorised owners.

Fourth, add AI where it earns its place. Source-linked answers and structured handoffs can be tested before transactional agency. Quote/order actions require approved prices, verified fitment, identity controls, explicit human approval and authoritative acknowledgement. No peer assistant announcement establishes Solis readiness.

Finally, decide with measured evidence. Broaden only when the pilot improves comparable tasks, resolves material failures and has an accountable operating model. If existing tools already meet the need, invest in configuration, data quality and adoption. If the data cannot support safe parts or commercial automation, retain human-assisted requests and narrow the scope.

23 Research limitations and material corrections

The work is public-source desk research. It did not include authenticated systems, direct interviews, catalogue licences, real machine records, transaction execution or certified Dutch registry extracts. Source access failures included timeouts, JavaScript-only pages, a sign-in-gated document centre, protected survey results and an unavailable US brochure. Those limitations restrict claims, not the usefulness of the decision framework.

No exact Solis machine-versus-parts/after-sales financial split, local installed base, verified returns cost, adoption baseline, implementation cost or ROI was established. FY2026 ITL audited statements were not obtained; ICRA's FY2025 reproduction is labelled Reported. Peer fiscal years and entity perimeters remain distinct.

The major corrections are: solis.eu is an unrelated namesake; public Dutch selection, configuration and ecommerce already exist; a dealer portal cannot be declared absent; stock labels do not prove real-time inventory; a warranty form does not prove full machine history; a partner parts hub does not identify every engine or its data rights; an appliance/solar Solis business must not enter the tractor map; and parts/service peer gross profit is not Solis machine revenue.

The targeted Dutch refresh additionally verifies the actual comparison table and public registration intake, correcting earlier access/coverage limits. It records the demo editorial placeholder, zero-width selector results, cross-channel specification differences and registration-policy questions as specific findings for accountable owners. These are newly verified research findings; no website deployment dates or successful form-processing results are inferred. [B26, I31, B28, B25, B35, I32]

The proposed screens, architecture, roles, roadmap and interview sample are original analytical recommendations. Their data owners and system-of-record boundaries are provisional. Further implementation decisions should replace those assumptions with documented operational evidence.

24 Detailed source register and appendices

The following register records the reviewed sources and limitations. The accompanying CSV is the searchable evidence record; the financial workbook contains sourced actuals and the separate illustrative scenario build. The Visual Assets directory contains the original diagrams, chart and wireframes used in the report.

I01 Solis Deutschland redirected from solis.eu

Solis household appliances | Verified | Published not stated | Accessed 2026-11-03

https://solis.eu/

Supports: solis.eu redirects to solis.de appliance site; exclude from tractor ecosystem

Evidence and limits: Opened domain; coffee kitchen beauty climate; Swiss family company description Namesake; no tractor-brand relationship established

I02, M01 Become a Solis Dealer

Solis World ITL | Verified | Published Undated | Accessed 2026-11-03

https://solisworld.com/become-a-dealer/

Supports: Public dealer interest form captures contact country company address products sold and years in business; follow-up by company team

Evidence and limits: Opened page; inspected form fields and follow-up text No application submitted; qualification, approval, agreements and provisioning not observed

I03 International Tractors Limited Ratings reaffirmed

ICRA | Reported | Published 2024-09-30 | Accessed 2026-11-03

https://www.icra.in/Rating/ShowRationalReportFilePdf/130279

Supports: Solis Tractors & Agricultural Machinery BV 100% ownership full consolidation

Evidence and limits: Annexure II page 6; source ITL consolidated annual report FY2023 Historical credit agency reproduction; superseded for currency by I27

I04, I36, B30 Solis Nederland AgriXpert BV dealer in Schipluiden

Solis Nederland AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.solistractor.nl/dealers/agrixpert/

Supports: Dealer details provide phone route shop link and call-for-current-availability guidance

Evidence and limits: Original page opened; current availability and visit demonstration call instruction visible No inventory reservation or service booking execution verified

I05 Agrixpert home

AgriXpert | Verified | Published not stated | Accessed 2026-11-03

https://www.agrixpert.com/

Supports: AgriXpert describes membership of DIGO group and ecommerce account benefits

Evidence and limits: Homepage group description; account login and order/shipping history benefit list No legal shareholding chain verified

I06 Best Farm Tractor Mini Tractor for Sale

Solis World / ITL | Verified | Published not stated | Accessed 2026-11-03

https://solisworld.com/

Supports: Global catalogue contains EU/global range and country selector linking Netherlands

Evidence and limits: Country selector Netherlands to solistractor.nl; product engines/implements Public marketing counts not audited; no central pan-European site established

I07, B23 Keuzehulp welke Solis past bij uw werk

Solis Nederland AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.solistractor.nl/keuzehulp/

Supports: Three-step selector provides work transmission and width criteria

Evidence and limits: Followed actual links loading then shuttle; counts 12 to8 to4 Rules beyond sampled routes not exhaustively tested

I08, B27 Solis S26 Mechanisch 26pk prijs en specificaties

Solis Nederland AgriXpert | Verified | Published Price basis2026-02-01 | Accessed 2026-11-03

https://www.solistractor.nl/modellen/s26/

Supports: Configurator options dependencies indicative price disclaimer and dealer-selected quote form present

Evidence and limits: Original page and public form markup read; model hidden field present; no form sent Browser recalculation and full option payload transfer delivery CRM acknowledgement untested

I09, B35 Solis16 4WD

AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.agrixpert.com/solis-16-4wd

Supports: Importer purchase page stock options VAT prices cart; lift500kg width90cm differ from Dutch model index

Evidence and limits: Direct public HTTPS HTML text inspected; product detail500kg and descriptive90cm; links solistractor.nl Version/configuration basis unresolved; no cart action checkout or live quantity verification; do not choose correct specification without owner

I10 Haendlerlogin

Solis Germany / ILAFA | Verified | Published not stated | Accessed 2026-11-03

https://www.solis-traktor.de/haendlerlogin

Supports: Explicit Solis dealer portal login exists in Germany

Evidence and limits: Email/password form and dealer-area description No credentials used; functionality and NL access unknown

I11 Leading Agricultural Tractor Implements Manufacturer

Solis Romania / DELTATEH | Verified | Published not stated | Accessed 2026-11-03

https://tractoarelesolis.ro/

Supports: Country-linked site exposes DMS/IBIZ login to crm.sonalika.com/EMS

Evidence and limits: Global selector link provenance; opened page DMS and IBIZ anchors Endpoint timed out; no authenticated features verified

I12 Impressum

ILAFA eG | Verified | Published not stated | Accessed 2026-11-03

https://www.solis-traktor.de/impressum

Supports: German tractor website legal operator ILAFA eG Radolfzell

Evidence and limits: Legal notice company address registry 550028 Freiburg Does not prove ITL ownership or country exclusivity

I13 Global Leader in Agricultural Innovation About Solis

Solis World / ITL | Verified | Published not stated | Accessed 2026-11-03

https://solisworld.com/about-solis/

Supports: ITL corporate/production and international network self-description

Evidence and limits: Body incorporation1995 versus generic1969 footer; EU/nonEU markets and manufacturing described Marketing counts vary; not audited current volumes or installed base

I14 Solis Tractors Agricultural Machinery BV

Compadex | Reported | Published not stated | Accessed 2026-11-03

https://www.compadex.com/nl/businesses/nl/solis-tractors-agricultural-machinery-b-v-73516228-41551346

Supports: Registry aggregator reports KvK73516228 Hoofddorp Polarisavenue130

Evidence and limits: Opened listing business/address records; opened version updated8Aug2025 Not certified KvK extract; search snippet had different update; address differs from EIMA

I15, I38, B29 Dealers

Solis Nederland AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.solistractor.nl/dealers/

Supports: Locator19 dealers1subdealer province selector generic stock labels; subdealer lacks own stock

Evidence and limits: Direct public HTTPS HTML retrieved after research-tool timeouts; full text inspected Generic stock label not SKU quantity or live data feed; active contractual roster not verified

I16 Solis Tractors Agricultural Machinery BV exhibitor

EIMA / FederUnacoma | Reported | Published not stated | Accessed 2026-11-03

https://www.eima.it/en/2530/solis-tractors-agricultural-machinery-bv

Supports: Exhibitor lists Solis BV at Rijksstraatweg34 Schipluiden

Evidence and limits: Opened current2026 exhibitor page company/address and ITL brand profile Exhibitor record not corporate registry; shared address not identity or ownership proof

I17, B24 Keuzehulp loading shuttle no width restriction result

Solis Nederland AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.solistractor.nl/keuzehulp/?situation=laden&transmission=shuttle&width=any

Supports: Result heading four matches but returned text three cards; S50 and S60 widths zero

Evidence and limits: Linked final result opened; heading4 cards S26ShuttleXL S50 S60; width0cm latter two Returned content observation; native browser visual confirmation unavailable; do not infer actual machine width

I18 Solis Prijslijst per 01 02 2026

Solis Nederland / AgriXpert | Verified | Published 2026-02-01 | Accessed 2026-11-03

https://www.solistractor.nl/wp-content/uploads/2026/08/Solis-prijslijst.pdf

Supports: Dated public11-page price list covers machines tyres loaders installation and options

Evidence and limits: PDF internal effective date1Feb2026; S26 page4 EUR10150 excluding VAT per model page Promotional validity dealer confirmation required; upload path is not effective date

I19 Solis tractoren

AgriXpert | Verified | Published not stated | Accessed 2026-11-03

https://www.agrixpert.com/tractoren/tractoren/solis

Supports: Importer ecommerce lists Solis tractors and attachments with prices and cart entry

Evidence and limits: 20 products in opened category; account benefits and cart Product count volatile; dealer wholesale functions not established

I20, I33, B31 Service en ondersteuning

Solis Nederland AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.solistractor.nl/klantenservice/

Supports: Parts request links dealer locator; asks model serial hours; warranty registration links dedicated form

Evidence and limits: Direct HTTPS text and hrefs inspected after web tool timeout; parts href/dealers and registration href/garantieformulier Public human-assisted journey does not prove manual internal workflows or absence private parts systems

I21, I37, B34 Informatie over Solis tractoren

Solis Nederland AgriXpert | Verified | Published Not stated | Accessed 2026-11-03

https://www.solistractor.nl/informatie/

Supports: Company describes NL operational parts route via Almere and names different component suppliers

Evidence and limits: Original page opened sections Partners and Garantie en onderdelen Company description not warehouse audit or licence confirmation; no full build-to-component map

I22, B16 Tractor Parts

Solis World | Verified | Published Not stated | Accessed 2026-11-03

https://solisworld.com/tractor-parts/

Supports: Global company page describes German Yanmar joint venture parts hub and sub-48-hour delivery

Evidence and limits: Germany section lines 214–223 Company claim only; not a measured service level; current operational route and contractual entitlement need confirmation

I23 Contact dealer subject

Solis Nederland / AgriXpert | Verified | Published not stated | Accessed 2026-11-03

https://www.solistractor.nl/contact/?onderwerp=dealer

Supports: NL become-dealer link is general contact form route

Evidence and limits: Name email phone subject message privacy checkbox No qualification/credit/agreement/provisioning workflow demonstrated

I24 Garantie aktivieren

Solis Germany / ILAFA | Verified | Published not stated | Accessed 2026-11-03

https://www.solis-traktor.de/garantie

Supports: German warranty registration form exists

Evidence and limits: Invoice upload PDFJPGPNG; optional serial/model/date; staff review described German coverage only; no submission; do not apply to NL

I25, I32 Garantie op Solis tractoren

Solis Nederland / AgriXpert | Verified | Published not stated | Accessed 2026-11-03

https://www.solistractor.nl/garantie/

Supports: Warranty information links to Dutch registration; terms vary by model

Evidence and limits: Page contains registration link; valid Dutch plate condition for extension; dealer confirmation Policy interpretation and exact eligibility require owner confirmation; form permits blank plate, potentially different registration stage

I26, B14 Compact Tractor for Superior Farming Efficiency

Solis World | Verified | Published Not stated | Accessed 2026-11-03

https://solisworld.com/solis-s26-compact-tractor/

Supports: S26 page describes three-cylinder Mitsubishi engine

Evidence and limits: Engine section lines 239–242; page uses S26 and S26+ labels Market and build-specific engine configuration not verified; model-name ambiguity needs serial/build validation

I27, F01 International Tractors Limited Ratings reaffirmed

ICRA | Reported | Published 2025-11-28 | Accessed 2026-11-03

https://www.icra.in/Rating/GetRationalReportFilePdf?id=139360

Supports: ITL FY2024 and FY2025 financial indicators and Solis BV ownership

Evidence and limits: Audited indicator table p4; export discussion p2; ownership annexure p6 reproduces company accounts. Rating agency reproduction, not underlying audited accounts. No Solis brand, Dutch or parts revenue split. Finance consolidation scope requires reconciliation.

I28, I34 Privacybeleid

Solis Nederland / AgriXpert | Verified | Published not stated | Accessed 2026-11-03

https://www.solistractor.nl/privacybeleid/

Supports: Public purposes/contact present; detailed legal-controller and extraction data map not established

Evidence and limits: Original page sections cover contact/warranty purposes general retention/security and rights; AgriXpert footer Do not infer absence of internal agreements or legal noncompliance; no specific extraction processor/retention verified

I29 Global Download Center folder

Solis World / Google Drive | Open question | Published not stated | Accessed 2026-11-03

https://drive.google.com/drive/folders/17tWwFbPSFUTQHPbf4EIDB1IlVkhGKnSi?usp=sharing

Supports: Global download centre target not inspectable in research tool

Evidence and limits: Official footer link followed; redirected Google sign-in Do not infer contents require private access for everyone; tool limitation only

I30 DMS endpoint

ITL / Sonalika | Open question | Published not stated | Accessed 2026-11-03

https://crm.sonalika.com/EMS/

Supports: Official-country-linked DMS destination timed out

Evidence and limits: Followed Romanian DMS anchor No endpoint function/access claim beyond publicly linked destination

B01 Intranet Multi Links

Kubota Europe SAS | Verified | Published Not stated | Accessed 2026-11-03

https://landing.kubota-eu.com/intranet-multi-links/

Supports: Permissioned SSO dealer workspace links sales training technical warranty maintenance and parts applications

Evidence and limits: Public directory lines 31–124 identifies CDC SSO, prior authorisation, Showell, e-learning, K E-Service, SCC, KITS, K-PAD and KEP Public documentation; authenticated tools not entered; no performance verification

B02 How To Shop

CNH MyCNHStore | Verified | Published Not stated | Accessed 2026-11-03

https://www.mycnhstore.com/it/it/caseih/HowToShop

Supports: Parts search by serial model and part; diagrams fitment availability saved equipment shopping lists orders and checkout described

Evidence and limits: Guide lines 218–299 describes capabilities; lines 338–340 says not all dealers available; photo upload UI lines 378–417 Italian route contains English guide and payment references; do not presume all functions/payment types apply in Netherlands; no live order or image accuracy test

B03 Genuine New Holland Parts

New Holland Agriculture CNH | Verified | Published Not stated | Accessed 2026-11-03

https://agriculture.newholland.com/en-us/nar/services-and-solutions/parts

Supports: North America MyCNHStore offers model serial keyword discovery and account shopping lists equipment single cart

Evidence and limits: Official product page lines 5–12 and dealer fulfilment lines 82–86 North American scope; manufacturer description not completed transaction

B04 CASE IH PRO

CNH Industrial America LLC | Verified | Published Not stated | Accessed 2026-11-03

https://pro.caseih.com/site/accountview/login

Supports: Dealer sales support platform with information assistance tools training and Dealer Portal login

Evidence and limits: Public login page lines 2–9 No authenticated features inspected; does not establish CRM quote management or dashboards

B05 eTIM Login

CNH | Verified | Published Not stated | Accessed 2026-11-03

https://services.cnh.com/etim/

Supports: eTIM requires Dealer Portal credentials

Evidence and limits: Original login page explicitly requests Dealer Portal ID and password Login presence only; underlying functionality not inspected

B06 Warranty Information Tool Login

CNH | Verified | Published Not stated | Accessed 2026-11-03

https://services.cnh.com/wit/

Supports: Warranty Information Tool requires Dealer Portal credentials

Evidence and limits: Original login page requests Dealer Portal ID and password No claims execution demonstrated

B07 AGCO Tech Connect

AGCO Corporation | Verified | Published Not stated | Accessed 2026-11-03

https://www.agcocorp.com/us/en/home/brands-and-solutions/service-and-information/agco-tech-connect.html

Supports: Dealer portal PDI technical incidents knowledge search partial serial lookup notifications mobile evidence and offline PDI

Evidence and limits: Official page lines 19–42 documents modules and workflow capabilities Manufacturer description; no quantified productivity outcome verified

B08 Spare parts

Fendt AGCO GmbH | Verified | Published Not stated | Accessed 2026-11-03

https://www.fendt.com/int/parts-service/spareparts

Supports: AGCO Parts Books dealer access and ordering; mobile exploded views hotpoints emailed basket and offline lists

Evidence and limits: Official page sections AGCO Parts Books and Books To Go lines 39–57 Account required via Fendt partner; emailed basket is not transactional checkout; regional coverage not tested

B09 AGCO Service and Information Resources for Customers

AGCO Corporation | Verified | Published Not stated | Accessed 2026-11-03

https://www.agcocorp.com/us/en/home/brands-and-solutions/service-and-information/agco-service-and-information-resources.html

Supports: Registered customer machine manuals warranty information and dealer-mediated diagnostics; EU dealer tool web store

Evidence and limits: Sections Service and Information Portal, Process for dealers in EU, and access process Supported models vary; no Solis diagnostic entitlement implied

B10 John Deere Credentials

VitalEdge IntelliDealer technical documentation | Verified | Published 2026-02 revision | Accessed 2026-11-03

https://help.intellidealer.com/intellidealer/Content/configuration.interfaces.deere.credentials.htm

Supports: DMS vendor documents licensed Deere quote parts availability warranty credit EPC proactive jobs and telematics interfaces

Evidence and limits: Interface table lines 114–123 and scope/credentials instructions Primary vendor documentation of integration; not Deere certification for all dealers or proof of Solis integration

B11 My Dealer John Deere Parts Catalog Integration

VitalEdge IntelliDealer technical documentation | Verified | Published 2024-10 revision | Accessed 2026-11-03

https://help.intellidealer.com/intellidealer/Content/configuration.interfaces.deere.partscatalog.credentials.htm

Supports: EPC selections transfer to dealer cart for logged-in and guest flows with licensing credentials and exceptions

Evidence and limits: Prerequisites and process walkthrough lines 108–202; unmatched local parts sent to parts manager Specific vendor interface; credentials/licences required; does not grant reusable catalogue or API rights

B12 Introduction to MyDealer

VitalEdge IntelliDealer technical documentation | Verified | Published Not stated | Accessed 2026-11-03

https://help.intellidealer.com/intellidealer/Content/Ref/MyDealer_Introduction.htm

Supports: Customer portal exposes invoices equipment service requests quotes and parts commerce

Evidence and limits: Public product help lines 54–75 Vendor platform is not Deere-exclusive; requires licensed IntelliDealer

B13, M10 Solis USA service and support

Solis Tractors USA | Verified | Published Undated | Accessed 2026-11-03

https://solistractorusa.com/content/sportsman/service.php

Supports: Official US service page states dealers order parts through a Solis dealer portal and customers order through dealers

Evidence and limits: Opened page Ordering and Fulfillment Process lines 42 to 45 Company-described US capability; portal not accessed; EU/NL scope unknown; inconsistent HQ statements elsewhere not relied on

B15 Frequently asked questions

Diesel Equipment Trading | Verified | Published Not stated | Accessed 2026-11-03

https://webshop.det-mitsubishi.com/faq.aspx

Supports: Distributor requests engine model serial application; manuals purchased; ordering login needs delivery and payment agreement

Evidence and limits: FAQ engine identification ordering and self-order sections; company describes Mitsubishi distribution role No verified supplier relationship with every Solis model; no catalogue redistribution licence or API rights established

B17 Dealer Manufacturer Relations Survey

North American Equipment Dealers Association | Verified | Published Not stated | Accessed 2026-11-03

https://www.naeda.com/dealer-manufacturer-relations-survey/

Supports: Primary dealer survey evaluates parts availability quality returns technical support warranty and communication

Evidence and limits: Annual assessment description lines 245–253; results download redirects to password-protected page North American study; proprietary latest results not reviewed; no Solis or Dutch scores inferred

B18 Questions To Ask Before Acquiring A New Manufacturer

Western Equipment Dealers Association hosted by NAEDA | Verified | Published 2020 | Accessed 2026-11-03

https://www.naeda.com/wp-content/uploads/2020/03/Questions-To-Ask-Before-Acquiring-A-New-Manufacturer.pdf

Supports: Dealer readiness checklist includes territory finance stocking payment returns tools training warranty reimbursement and contract responsibilities

Evidence and limits: PDF page 2 ten desirable provisions; subsequent detailed questions Industry association guidance from North America; not Solis agreement or Dutch legal advice

B19 Summit vs Kubota vs

Reddit r tractors user japollner | Reported | Published Relative timestamp approximately two years ago; exact date not verified | Accessed 2026-11-03

https://www.reddit.com/r/tractors/comments/1h25w0w/summit_vs_kubota_vs/

Supports: One self-described New Hampshire Solis and TYM dealer says perceived parts availability and network influence sales preference

Evidence and limits: Comment by japollner at lines 432–437 in opened thread Anonymous identity not independently verified; qualitative US anecdote; not representative of NL or entire network

B20 Solis Summit 26 and flail mower

Reddit r tractors user C-man14 | Reported | Published Relative timestamp approximately one year ago; exact date not verified | Accessed 2026-11-03

https://www.reddit.com/r/tractors/comments/1nyh8nq/solissummit_26_flail_mower/

Supports: One owner reports a nearby dealer and spare parts availability

Evidence and limits: C-man14 pros and cons comment includes dealer 30 km away and parts availability Self-reported geography and machine configuration not verified; not a Dutch dealer finding

F02 AGCO 2025 Annual Report

AGCO Corporation via SEC | Verified | Published 2026; exact issue date not established | Accessed 2026-11-03

https://www.sec.gov/Archives/edgar/data/880266/000088026626000027/agco2025annualreport_ars.htm

Supports: AGCO 2023 to 2025 revenue by product, and 2025 Europe Middle East parts sales

Evidence and limits: Audited financial statements Disaggregated Revenue pp113 to115. Group and regional OEM sales; not Solis. Parts exclude separately unidentified services. G&P divestiture in November2024 changes denominator.

F03 Titan Machinery FY2026 Form 10 K

Titan Machinery via SEC | Verified | Published 2026-03-31 | Accessed 2026-11-03

https://www.sec.gov/Archives/edgar/data/1409171/000162828026022376/titn-20260131.htm

Supports: Dealer revenue, gross profit and segment mix

Evidence and limits: Year ended31 January2026; pp31 to33 and Note3 p62; amounts USD thousands. Multi-brand dealer group including construction, Europe and Australia. Retail vs OEM economics differ. Service gross profit definition differs from parts.

F04 CNH 2025 Form 10 K

CNH via SEC | Verified | Published 2026; exact filing date not established | Accessed 2026-11-03

https://www.sec.gov/Archives/edgar/data/1567094/000156709426000006/cnhi-20251231.htm

Supports: CNH segment net sales and aftersales business relevance

Evidence and limits: Parts and Services pp10 to11; segment net sales pp49 to50. Reviewed disclosure does not isolate parts revenue; do not infer parts share from Agriculture total.

F05 Deere and Company FY2025 Form 10 K

Deere and Company via SEC | Verified | Published 2025-12-18 | Accessed 2026-11-03

https://www.sec.gov/Archives/edgar/data/315189/000110465925122321/de-20251102x10k.htm

Supports: Equipment operations net sales include service parts and technology

Evidence and limits: Item1 Equipment Operations and Note27 Segment Data. No isolated comparable parts percentage found in reviewed revenue and segment disclosures. FY ends2 November2025.

F06 Financial Results for the Year Ended December 31 2025 IFRS

Kubota Corporation | Verified | Published 2026-02-12 | Accessed 2026-11-03

https://www.kubota.com/ir/financial/release/data/136q4e.pdf

Supports: Kubota group and Machinery 2025 revenue

Evidence and limits: Earnings release p1 and segment/product tables. Parts revenue not isolated in reviewed release. Earnings release rather than audited annual statement.

M02 FarmerCore annual report strategy

AGCO | Verified | Published 2025 annual report context | Accessed 2026-11-03

https://www.agcocorp.com/us/en/home/annual_report/our-strategy/farmercore.html

Supports: AGCO describes AgBot within AGCONet answering dealer parts/service questions; FarmerCore connects online configure and parts with dealer delivery and service

Evidence and limits: Opened official page sections Creating A Seamless Digital Journey and Global Support Powered by AI Company capability description; no login, accuracy or independent adoption verification

M03 Cat AI Assistant

Caterpillar | Verified | Published Undated 2026 context | Accessed 2026-11-03

https://www.cat.com/en_US/support/technology/cat-ai-assistant.html

Supports: Guest and logged-in assistance; parts/manual/fleet/dealer support; progressive rollout across Cat applications

Evidence and limits: Opened official support page Rollout differs by surface; no account transaction test or proven autonomous ordering

M04 Caterpillar brings intelligent solutions to life at CONEXPO CON AGG 2026

Caterpillar | Verified | Published 2026-03 | Accessed 2026-11-03

https://www.cat.com/content/dam/catDotCom/documents/trade-press-releases/en_us/2026/march/40PR26.pdf

Supports: Off-board Cat AI Assistant described as now available; in-cab application described as prototype

Evidence and limits: Opened four-page official press release; text on pages 1 and 2 Later refetch timed out; manufacturer assertion not independently tested

M05 John Deere introduces JD the AI assistant that helps farmers put their data to work

John Deere | Reported | Published 2026-09-01 | Accessed 2026-11-03

https://www.deere.ca/en-ca/john-deere-news/introducing-jd-ai-assistant

Supports: JD announced with limited early access for selected US agricultural customers; broader availability planned

Evidence and limits: Official indexed article discovered; direct open returned JavaScript-only shell Full original article could not be inspected; limited evidence; not proof broad production rollout

M06 A 24 7 sales assistant on Azure that takes real orders with enterprise grade security

Unlock Management | Reported | Published 2026-02 | Accessed 2026-11-03

https://www.unlockmanagement.com/cases/ajusa-azure-sales-assistant/

Supports: Implementer describes Ajusa assistant connected to SAP/catalog APIs creating and changing orders with explicit confirmations and auditing

Evidence and limits: Opened named implementer case study Vendor case study; no customer-side confirmation, adoption or quantified outcome evidence

M07 Product Suggestions

Sana Commerce documentation | Verified | Published Undated | Accessed 2026-11-03

https://support.sana-commerce.com/Content/Sana-User-Guide/Ordering-Checkout/Product-Suggestions.htm

Supports: Product suggestions can be produced by ERP rules using customer order history

Evidence and limits: Opened product documentation Documented software feature rather than a named deployment; not evidence of AI agency

M08 Sustainability Report 2016 dealer management

CNH Industrial | Verified | Published 2017 reporting 2016 | Accessed 2026-11-03

https://www.cnh.com/-/media/CNHi/cnhicorporate/Sustainability/sustainability_reports/docs/CNH_Industrial_2016_Sustainability_Report_PRINTABLE.pdf?rev=-1

Supports: Historical eNAAF cross-functional approvals, contracted dealer provisioning, role training and dealer sales/after-sales portal documented

Evidence and limits: Opened PDF; inspected printed pages 229 to 231 including page screenshot Historical precedent only; cannot establish current CNH or Solis process

M09 Kubota Engine Dealer Program

Kubota Engine America | Verified | Published Undated | Accessed 2026-11-03

https://www.kubotaengine.com/service/dealer-program/

Supports: Dealer authorizations differ for full service specialized and trade partner; training and technical resources described

Evidence and limits: Opened dealer program and navigation to academy parts and warranty systems US engine channel; requirements not transferable to Dutch tractor dealerships

M11 Solis USA dealer recruitment brochure

Solis Tractors USA | Open question | Published 2025 path | Accessed 2026-11-03

https://solistractorusa.com/wp-content/uploads/2025/07/solis-dealerrecruitment-web.pdf

Supports: Search discovery suggested additional portal documentation; excluded as substantive evidence

Evidence and limits: Direct fetch returned 404 Unavailable original; indexed snippets not sufficient
